Оxylabs получила инвестиции в размере 130 миллионов долларов от ведущей частной инвестиционной компании Warburg Pincus. Благодаря этим инвестициям стоимость группы компаний Оxylabs достигла 3,6 миллиарда долларов, что делает ее вторым «единорогом», вышедшим из акселератора [Tesonet](#), и одной из самых дорогих компаний в истории Литвы.

технологических команд по всему миру, играет ключевую роль в эпоху агентного искусственного интеллекта в интернет-поиске.

По мере того как агенты с искусственным интеллектом начинают ориентироваться в сети гораздо лучше, чем когда-либо ориентировались люди, будущее за инфраструктурой данных, которая обеспечивает бесперебойную работу этих систем в режиме реального времени. Именно этим и занимается компания Oxylabs на протяжении последнего десятилетия, будучи ответственным, соблюдающим требования и этичным оператором. Эта инфраструктура уже используется во многих сферах, и от нее зависит наступление новой эры.

Витаутас Савицкас, генеральный директор Oxylabs

Инвестиции и одобрение со стороны Warburg Pincus также имеют значение в более широком национальном и международном контексте.

Это достижение показывает, что у Европы есть потенциал для создания суверенных технологий мирового уровня, от которых зависят ведущие разработчики в области искусственного интеллекта. В то же время это повод для гордости за Литву, демонстрирующий, что такие ведущие компании, как Oxylabs, могут быть созданы благодаря неустанному труду наших талантливых специалистов. Вместе с Warburg Pincus мы будем развивать этот импульс и наше лидерство в области инфраструктуры веб-данных и разработки продуктов, а также продолжим реализовывать нашу долгосрочную стратегию.

Витаутас Савицкас, генеральный директор Oxylabs

Инвестиции Warburg Pincus также свидетельствуют о признании рыночных возможностей, открывающихся в связи с растущим спросом на веб-данные и стимулируемых агентным искусственным интеллектом, а также об уникальной позиции Oxylabs, позволяющей извлечь из этого выгоду.

Принятие решений в режиме реального времени и агенты на основе искусственного интеллекта повышают и без того стремительно растущий спрос на данные

инвесторов. Масштабируемые решения для доступа к веб-данным изменили отрасли и сервисы, от которых выигрывают миллиарды людей по всему миру, включая туризм, защиту брендов, кибербезопасность и мониторинг угроз, аналитику в сфере электронной коммерции и журналистские расследования. Эти решения постоянно повышают качество жизни потребителей благодаря бизнесу, основанному на данных в режиме реального времени и автоматизированном принятии решений.

The growing demand across traditional industries is catalyzed by data becoming the lifeblood of all things AI. From training models and powering agents that deliver real-time web-based answers to helping companies optimize their presence in AI generated results – every stage of the AI ecosystem relies on access to real-time data.

The emergence of AI agents that autonomously browse the web, gather information, and execute scheduling, booking and other tasks rapidly multiplies the demand for infrastructure that can reliably facilitate such access.

We have proven our ability to execute as the leader in data infrastructure platforms with our portfolio of leading Fortune 500 and AI companies. As we continue to scale our product portfolio, we will focus on expanding and strengthening our global network, further advancing our technology, and delivering more value to our customers and developers around the world.

Vytautas Savickas, CEO of Oxylabs

While Oxylabs' results are impressive, and its appeal to investors in the agentic AI era is well-earned, it is the foundation built over the last decade that ultimately mattered most.

Bootstrapped to market leadership

Ever since its founding in 2015, Oxylabs has asserted itself as a leading voice in shaping the web data access industry. Today's market position is the result of a long-term strategy that prioritizes leadership in infrastructure, innovation, compliance, and strategic prudence

Oxylabs' technological leadership, underpinned by a global infrastructure handling billions of requests daily and portfolio of over 160 patents, helped position the company as a standout opportunity for investors.

sophisticated, robust, and compliant technology and expansive network. We are excited to support the Oxylabs team as they continue to expand their offering to help their blue-chip customers access and unlock data-driven insights.

Allison Ross, Principal, Warburg Pincus

The trust of renowned investors also further validates Oxylabs' long-standing compliance efforts.

From co-founding the [Ethical Web Data Collection Initiative](#) (EWDCI) and creating an industry-first ethical proxy procurement framework spearheaded by one of the biggest passive income applications out there ([Honeygain](#)) Oxylabs continues to stress the importance of responsible practices and draws a clear line between the legitimate industry it represents and the actions of providers with low or collapsing reputations.

The due diligence by Warburg Pincus is another in the long line of checks and audits, consistently confirming the trustworthiness and robust security posture of Oxylabs, evidence of which can be accessed transparently at the [Oxylabs Trust Center](#).

This investment will also expand Oxylabs' capabilities in acquisitions and partnerships, building further on the acquisitions of Webshare Software in 2022 and ScrapingBee in 2025 that were success stories in terms of product portfolio enhancement.

Both acquisitions, enhancing our ecosystem's product offering, allow us to better serve the diverse needs of the developer community as it continues to build AI agents and other crucial technologies of the unfolding future. We will further look for corporate development opportunities that will result in the next-generation tech products for the consumer.

Jurgis Rudgalvis, CFO at Oxylabs

A decade of bootstrapped growth, combined with the ability to integrate technological advancement implementing the highest standards of compliance, firmly positions Oxylabs at the forefront of the booming data industry.

The future in the making

for the agentic web.

As the market shifts toward agentic search we are further developing our product portfolio, including web index, headless browser, and other cutting-edge solutions. The next generation of AI won't be powered by static indexes that only capture yesterday's internet. For it to work at enterprise grade, the infrastructure behind them is key: the scale, speed, reliability, and compliance required to make open-web knowledge usable in real-time production.

Vytautas Savickas, CEO of Oxylabs

Thus, while capitalizing on the reliability of its infrastructure, Oxylabs is anticipating and innovating to meet the future needs of AI agents and developers.

The trust of Warburg Pincus pours more fuel into the engine that has long been powering data-driven businesses across industries and world-leading AI development. With this partnership and its unique position at the forefront of the data infrastructure industry, Oxylabs sets out to lead this next chapter for reliable web data access and the industries that depend on it.

Forget about complex web scraping processes

Choose Oxylabs' advanced web intelligence collection solutions to gather real-time public data hassle-free.
