В мире видеоигр есть авиасимуляторы, симуляторы вождения и даже симуляторы городского планирования. А теперь появился *Goat Simulator* от шведской студии Coffee Stain. Игра недавно вышла на

ПК <

Версии для Mac и

Linux доступны на сайте < [http://www.goat-](http://www.goat-simulator.com)

[simulator.com](http://www.goat-simulator.com)> игры. Я поговорил с Лайн Якобсен,

которая сказала: «Мы никогда не придумывали названия для *Goat Simulator*, но мне кажется, что исполнительный директор по козлиному делу — подходящее для меня название», — о происхождении этого вида.

< <https://i0.wp.com/paulsemel.com/wp-content/uploads/2014/07/Goat-Simulator-01.jpg> >

Для тех, кто не знаком с игрой: что такое *Goat Simulator* и как в нее играть?

Goat Simulator — это игра, в которой вы проживаете жизнь козла. Вы оказываетесь на месте козла и узнаете, каково это — быть козой. Вы бесчинствуете, устраиваете хаос, облизываете все подряд, попадаете под машины, бегаете по стенам и делаете все, что делают козы.

Откуда у вас возникла эта идея?

Один из наших дизайнеров предложил идею игры, которая была бы похожа на *Tony Hawk's Pro Skater* < [https://www.amazon.com/gp/product/B009CEM332/ref=as li tl?](https://www.amazon.com/gp/product/B009CEM332/ref=as_li_tl?ie=UTF8&camp=211189&creative=373489&creativeASI)

[N=B009CEM332&link_code=as3&tag=paulsemelcom-20&linkId=2NVFFDZEM5ML2CRY](https://www.youtube.com/watch?v=B009CEM332&link_code=as3&tag=paulsemelcom-20&linkId=2NVFFDZEM5ML2CRY)>, но вместо того, чтобы получать очки за крутые трюки на скейтборде, вы бы получали их за то, что устраиваете хаос и делаете то, чего не должны делать козы.

И с чего ты взял, что люди захотят играть в нее больше пяти минут?

Что ж, интернет довольно активно обсуждал необходимость выхода этой игры, и, в конце концов, подумайте сами: кто бы не хотел вести беззаботную жизнь козы? Это почти то же самое, что быть человеком, только без последствий.

Почему вы решили выбрать козу, а не носорога, мартышку или страхового агента?

Потому что коз недооценивают. Зайдите на YouTube и введите в поиск «козел», и следующие пять часов вы будете рыдать от смеха. А теперь попробуйте сделать то же самое, введя в поиск «страховой агент».

А как насчет метамфетамина? Думаю, симулятор метамфетамина мог бы быть классным. Или это было бы лишним. Не уверен.

Meth Head Simulator sounds like an educational simulator, which could be cool; let teens play a day in the life of a meth head, nobody would ever become a meth head after that. However, with *Goat Simulator*, we

wanted to make a game that let people live out a dream that they could not live out otherwise.

<https://i0.wp.com/paulsemel.com/wp-content/uploads/2014/07/Goat-Simulator-03.jpg>

When you were putting *Goat Simulator* together, and deciding how the goat would move and react in certain situations, did you go to a zoo or a farm, or even get yourselves a real goat, or did you just rely on what you knew about them from movies and cartoons?

We did visit a local goat farm, as you can see in the documentary made around *Goat Simulator*'s creation [[Goat Simulator: The Documentary](https://www.youtube.com/watch?v=S6UHLuyzRNc) <https://www.youtube.com/watch?v=S6UHLuyzRNc>], but the biggest inspiration was the vast amount of hilarious videos that exists of goats and their quirky ways. I think the most surprising thing we learned is that goats

sound a lot like humans. We actually recorded ourselves screaming madly and added that as the “baaah” sound for the goat. Nobody seemed to notice.

Oh, and no goats were harmed in the making of *Goat Simulator*.

One of the interesting things you did while making *Goat Simulator* is that you decided to keep in some of the bugs that cropped up. Not ones that broke the game, obviously, but any that did something funny or weird. Why did you decide to do this? Or did I just answer my own question?

The development of *Goat Simulator* served as a way for us to blow off some steam after our last game, and have a lot of fun with it. Bug fixing clashed a bit with that initial goal, as fixing bugs is boring and time consuming, so we just skipped that part wherever we could. Fortunately, it turned out that the bugs are also funny.

[< https://i0.wp.com/paulsemel.com/wp-content/uploads/2014/07/Goat-Simulator-bug.jpg>](https://i0.wp.com/paulsemel.com/wp-content/uploads/2014/07/Goat-Simulator-bug.jpg)

It seems like this is a game that's going to be the source of a lot of YouTube videos. Given that, did you build any systems into the game so people can capture footage and then upload it to YouTube automatically?

No, unfortunately not, but that is a great idea.

You're welcome. Feel free to use it for *Goat Simulator II: Electric Bookaloo*. So another thing I wanted to ask about is the perspective. *Goat Simulator* is a third-person game. Did you ever experiment with playing it first-person?

We never did experiment with first person camera. We felt it was detrimental to the game experience that you wouldn't get to see the goat's body flip and flop around at your demand.

The reason I'm doing this interview is that *Goat Simulator* is now being distributed by Deep Silver. And one of the things you're adding to this version of *Goat Simulator* are some four-player split-screen multiplayer modes: "Capture The Flag," "Racing," and "Ragdoll Hockey." How do those mode work with a goat?

Well, being a simulator we take inspiration from real life goats, and we have observed that goats are more than

capable of enjoying good team sports, so it only seemed fair to portrait that side of a goat's life as well.

Why did you decide to make them local multiplayer only?

Goat Simulator has a lot of lovely physics in it. Unfortunately, those physics and online multiplayer do not go hand in hand, as there would be a lot of synchronization issues. To add online multiplayer, we would have to remake the game from scratch, and dedicate a lot more time to its development, so we decided to go with the happy compromise of local multiplayer.

At the moment, *Goat Simulator* is only available on PCs, Macs, and Linux. Are there plans to also bring it to consoles or tablets?

Right now you can goat on Windows, Mac, and Linux, but the plan is to let people goat on as many platforms as possible.

< <https://i0.wp.com/paulsemel.com/wp-content/uploads/2014/07/Goat-Simulator-02.jpg> >

Finally, *Goat Simulator* is not the first game you guys at Coffee Stain Studios have made. If someone really loved *Goat Simulator* and wanted to play another game of yours, which would you recommend they play next and why?

is our big pride as developers, we put a lot of love and effort into that game and it deserves to be played.
