

Formalization of the principles of brain Programming (Brain Principles Programming)

E. Vityaev, A. Kolonin, A. A. Molchanov • Published 13 May 2022 • Computer Science, Philosophy

TLDR For the description and modeling of BPP, it is proposed to apply mathematical models and algorithms developed earlier, which modeling cognitive functions and base on well-known physiological, psychological and other natural science theories. [Expand](#)

От феноменологии к механизмам сознания: интегрированная теория информации 3.0

Масафуми Оидзуми

Л. Албантакис

Г. Тонони

Философия, Информатика · PLoS Comput. Biol.

2014

TLDR Представлена интегрированная информационная теория сознания 3.0, которая включает в себя ряд усовершенствований по сравнению с предыдущими версиями и постулирует следующее: переживание — это максимально несводимая концептуальная структура (MICS, совокупность концептов в пространстве квалиа), а набор элементов, которые ее порождают, представляет собой комплекс. Learning in a virtual model of the *C. elegans* nematode for locomotion and chemotaxis

A. Demin

E. Vityaev

Biology, Computer Science · [Biologically Inspired Cognitive Architectures](#)

2014

TLDR The results of experiments have shown that the movement function and associated orientation mechanisms of a nematode can be obtained by way of teaching only in interaction with the environment, and the proposed model of control system is quite effective and can be successfully used to control complex objects with many degrees of freedom.
