

The horizontal AI platform for enterprise superintelligence

Get a demo

[Watch video →](#)

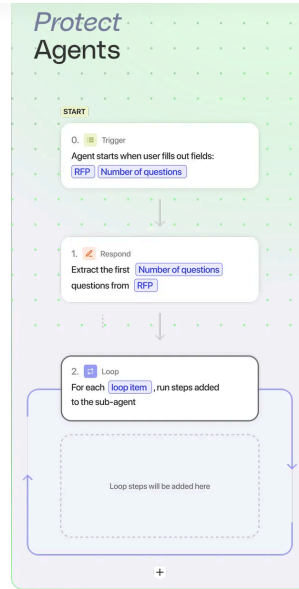

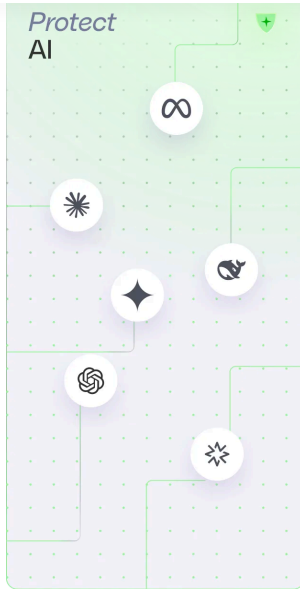

Enterprise Context

Context is the foundation for AI that can take on real work. Glean builds connectors that capture enterprise signals, search that indexes your data, an Enterprise Graph that maps how everything relates, and enterprise memory that learns your processes – giving you a platform with the full context needed to automate work.

[Explore Glean Enterprise Context](#)

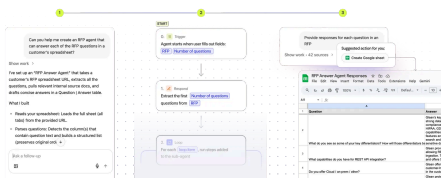

Glean Protect

Context is powerful, so it has to be protected. Glean runs in your single-tenant cloud, safeguards sensitive content, enforces strict permissions, and intelligently validates every agent action. Protect keeps your data safe and your agents reliable.

[Explore Glean Protect](#)

Glean Agents

Give agents a task, and they use context and reasoning to automate the work. Glean enforces agent behavior at runtime so they follow instructions, run to completion, and stay accurate – delivering real work reliably.

Open Platform

Index your data once and use it everywhere with Glean's open APIs, UI-ready web SDK, and headless MCP support. And because your AI stack will keep evolving, multi-cloud support, flexible model choice, and integrated security partners ensure Glean evolves with it.

[Explore Glean APIs](#)

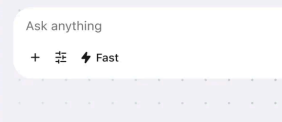

Search API

```
from glean.api_client import Glean

with Glean(
    api_token="YOUR_GLEAN_API_TOKEN",
    instance="your-company",
) as glean:
    res = glean.client.search.search(
        query="vacation policy",
    )
    print(res)
```

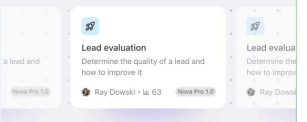

Chat API

```
from glean.api_client import Glean

with Glean(
    api_token="YOUR_GLEAN_API_TOKEN",
    instance="your-company",
) as g:
    r = g.client.chat.create(
        messages=[{
            "fragments": [{
                "text": "Summarize Q4"
            }],
        }],
    )
    print(r)
```

Agents API

```
from glean.api_client import Glean

with Glean(
    api_token="YOUR_GLEAN_API_TOKEN",
    instance="your-company",
) as g:
    agents = g.client.agents
    r = agents.create_and_wait_run(
        agent_id="agent_123",
        input={"query": "Analyze sales"}
    )
    print(r)
```

Glean is AI for work

Glean Search
Find what you need, wherever it lives at work. >

Glean Assistant
A personalized expert by your side. >

Glean Agents
Automate your work simply using natural language. >
