Личность Клода меняется в зависимости от Модели — И языка, на котором вы говорите

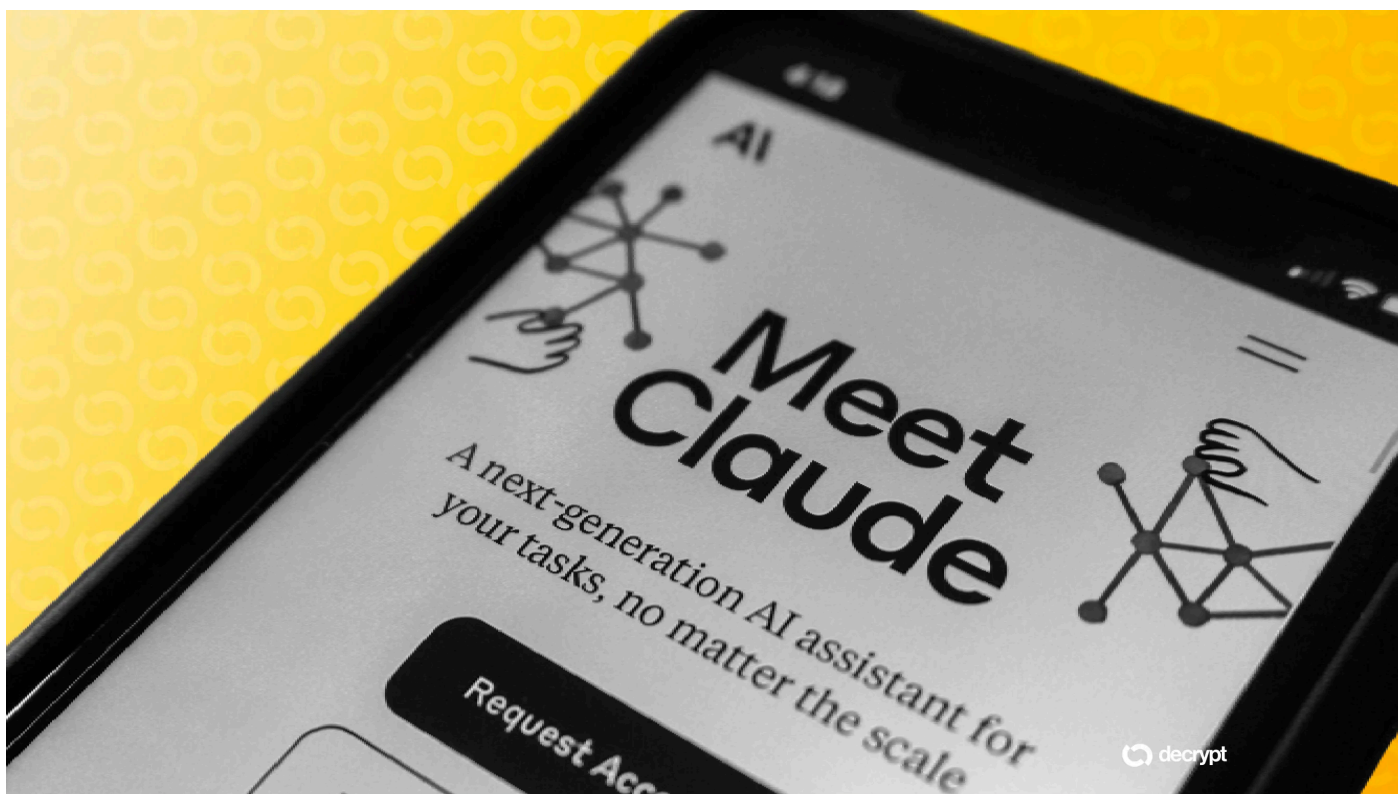

Согласно новым антропным исследованиям, Клод последовательно выражает разные ценности в разных моделях и на разных языках.

Вкратце

- Исследователи Anthropic проанализировали более 309 000 диалогов с Claude, чтобы изучить, как ИИ выражает свои ценности.
- По словам представителей компании, более 3300 выявленных ценностей были сведены к четырём поведенческим аспектам, включая почтительность и осторожность, а также теплоту и строгость.
- В Anthropic заявили, что ответы Claude различаются в зависимости от версии модели и языка.

Claude не ведёт себя одинаково в каждом диалоге. Согласно новому исследованию, опубликованному в

помощник последовательно выражает разные ценности в зависимости от того, какую модель выбирают пользователи и на каком языке они говорят.

В [отчете](#), опубликованном в понедельник, исследователи Anthropic проанализировали 309 815 обезличенных диалогов пользователей с Claude, в которых выполнялись субъективные задачи, такие как дача советов или обратная связь. По словам представителей компании, они свели более 3300 выявленных ценностей к четырем поведенческим аспектам: почтительность против осторожности, теплота против строгости, глубина против краткости и откровенность против исполнительности. Эти аспекты описывают, как меняются ответы Claude в каждом разговоре.

«Чтобы убедиться, что мы измеряем ценности, выраженные Клодом, а не различия в том, о чем или как спрашивали пользователи, мы учитывали задачу, тему и ценности, выраженные пользователями в каждом диалоге», — пишут исследователи.

По данным Anthropic, каждая модель Клода демонстрировала свой уникальный поведенческий профиль.

Sonnet 4.6 emphasized warmth, deference, and brevity, often affirming users and responding with humor or encouragement. At the same time, [Opus 4.7](#) emphasized rigor, caution, candor, and depth, more frequently challenging assumptions, explaining its reasoning, identifying risks, and acknowledging its limitations. [Opus 4.6](#) generally took a more concise, execution-focused approach while placing greater emphasis on rigor than Sonnet.

“These findings line up with how people perceive these models, both within Anthropic and online. Claude.ai users have commented that Opus 4.7 hedges its answers more often than other models,” the researchers wrote.

According to Anthropic, Claude's behavior also varied by language.

Arabic responses tended to be more deferential, while English responses placed greater emphasis on caution. Claude was warmest in Hindi and Arabic, using more polite, playful, and encouraging language. At the same time, English and Russian responses were more rigorous, frequently challenging assumptions, correcting details, and asking for evidence.

Anthropic AI Oversight Board Adds Ben Bernanke, Who Oversaw 2008 Financial Crisis at Fed

Former Federal Reserve Chairman Ben Bernanke, who led the U.S. central bank through the 2008 global financial crisis, has joined Anthropic's independent oversight body, the AI giant announced Thursday. The Anthropic Long-Term Benefit Trust is supposed to ensure the company...

English responses also tended to provide more detailed explanations, whereas Arabic responses were generally more concise. Dutch responses were the most candid, more readily acknowledging uncertainty and mistakes, while Indonesian responses focused more on completing the user's request.

Anthropic said the research does not suggest Claude itself has values. The company said it does not yet know what causes the differences—or whether they are desirable—but believes the framework could help evaluate future models and identify unintended behavioral changes.

The study is the latest in a series of Anthropic studies examining Claude's internal behavior.

In October, the company reported that its models showed early signs of what it called "functional introspective awareness," allowing them to recognize and describe aspects of their own internal processing. In April, Anthropic published research identifying internal "emotion vectors" that influence Claude's behavior, while stressing they are not evidence of emotions or consciousness.

'The Odyssey' Director Chris Nolan: Young Audiences are Rejecting 'AI Slop'

“The Odyssey” director Christopher Nolan famously doesn’t use a smartphone, so it’s perhaps unsurprising that he isn’t on board with the latest tech buzzphrase. On the press tour for his latest effort, Nolan told The Telegraph that young audiences are “utterly rejecting” generative AI, addin...
