Cursor незаметно приобретает Continue, альтернативу GitHub Copilot с открытым исходным кодом

Cursor незаметно приобретает Continue, помощника по написанию кода на основе ИИ с открытым исходным кодом и 34 000 звёзд на GitHub. В рамках сделки продукт будет закрыт, а кодовая база передана сообществу.

Консолидация инструментов для разработчиков ИИ продолжается быстрыми темпами: Cursor приобрел помощника по написанию кода с открытым исходным кодом **Continue** — это его последнее приобретение за напряженные 18 месяцев.

означает, что компания Илона Маска, специализирующаяся на ракетостроении, теперь также является владельцем Continue.

Условия сделки не разглашаются, и, по правде говоря, об этом особо и не объявляли. Примерно 16 июня Continue обновила свою домашнюю страницу, разместив на ней краткое сообщение о том, что сервис был куплен компанией Cursor, а также раздел с часто задаваемыми вопросами, в котором говорится, что у существующих пользователей есть время до 15 июля, чтобы экспортировать свои данные, прежде чем они будут удалены, и что регулярная оплата отключена.

Похоже, что Continue прекратила свою деятельность.

Cursor приобрела Continue

Подтверждение также поступило из онлайн-сообщений разработчиков **которые получили электронные письма** от Continue по поводу их аккаунтов, а также из LinkedIn, где **Маттаус Кшиковски** — бизнес-ангел, инвестировавший в Continue через Angel Invest, и давний партнер через свою компанию **dltHub**, занимающаяся обработкой данных, — опубликовал личное обращение к команде основателей, в которую входят **Тай Данн** и **Нейт Сести**.

специализирующейся на диалоговом искусственном интеллекте. В 2022 году

Данн стал одним из основателей компании dltHub, а в следующем году покинул ее, чтобы вместе с Сести основать Continue. По мнению Кшиковски, общепринятое мнение о том, что GitHub Copilot уже захватил рынок, было далеко от истины — взаимодействие с разработчиками по-прежнему оставляло желать лучшего.

“2023 was still very early days of coding agents – yet most investors thought GitHub Copilot had already won.”

“2023 was still very early days of coding agents – yet most investors thought GitHub Copilot had already won,” Krzykowski writes. “Back then, developers were stuck copy-pasting from ChatGPT and guessing what context Copilot used to make a suggestion. It was obvious there had to be a better way. Backing Ty and Nate was easy – I often bet on the people I’ve watched build up close.”

The open-source alternative

A graduate of Y Combinator’s Summer 2023 cohort, Continue positioned itself as the open-source alternative to the proprietary coding assistants flooding the market. Available as a VS Code extension, JetBrains plugin, and CLI, it let developers connect any AI model of their choosing and pull in context from their

The data control angle was central to the pitch — in a market dominated by closed-source tools that developers had little visibility into, Continue was positioning itself as the transparent alternative. Speaking to TechCrunch in early 2025 to mark the startup's \$3 million seed round, Dunn spelled out what that meant.

"When you use Continue, you get to keep your data," Dunn said at the time. "As an organization, you can pool all of your data for all of your developers in one place. That is not possible in the one-size-fits-all, black box code assistant, where their SaaS offerings and strategy is to take your data and use it to improve it for everyone."

Fast-forward 16 months, and that same startup has now been absorbed by one of the best-known proprietary players in AI coding tools. By the time of its acquisition, Continue had accumulated 34,300 GitHub stars and 4,800 forks, and raised in the region of \$5 million. The team pushed a final 2.0.0 release before closing up shop — removing telemetry and tidying the code, designed as part of a deliberate handoff to the community. Under its Apache 2.0 license, the codebase remains publicly available for anyone to fork and build on.

Cursor's quiet consolidation

The Continue acquisition is one of two Cursor-related stories that appear to have been buried beneath the big-bucks SpaceX news. At the same time, Cursor unveiled Origin at its Compile developer conference — an agent-native challenger to GitHub for code hosting and collaboration that similarly flew under the radar.

Moreover, it's the latest move in what has become a steady acquisition drumbeat for Cursor over the past 18 months, including AI coding assistant Supermaven and code review startup Graphite. Unlike Graphite, which has continued to operate as an independent product, the Continue deal has the hallmarks of an acqui-hire — the product appears to have been shuttered, with little public information on who from the Continue team will be making the move to Cursor.

According to Krzykowski, co-founder Nate Sesti is joining Cursor. Dunn's LinkedIn profile, meanwhile, suggests he departed Continue in May, a few weeks before the acquisition was made public, and it's not clear whether he will be making the move to Cursor. Chad Metcalf, who replaced Dunn as CEO in April 2025, hasn't made any public announcement about his next move. Two of Continue's founding engineers,

members of technical staff.

The New Stack has reached out to both Cursor and Continue for comment and will update this piece if or when we hear back.
