

Клод Код сейчас поддерживает артефакты

*Просматривайте свою
незавершенную работу в виде
интерактивной веб-страницы
в режиме реального времени,
созданной на основе полного
контекста сеанса и доступной
для вашей команды.*

С сегодняшнего дня Claude Code может сохранять ход работы в виде артефакта, превращая работу Claude Code в интерактивные

Сессия с использованием Claude Code может быть посвящена чему угодно: от расследования инцидента до рефакторинга сервиса или анализа данных за несколько месяцев. Артефакты превращают проделанную работу в веб-страницу, которую может открыть и изучить любой желающий. Это может быть пошаговое руководство по пул-реквесту, дашборд с возможностью фильтрации и сортировки данных или даже чек-лист для релиза, который заполняется по мере выполнения работы. Артефакты упрощают совместную работу над общими задачами, поэтому команды могут уделять больше времени созданию продукта и меньше — информированию о его статусе.

**Создано на основе
контекста вашего сеанса**

вашего кода, всплеске ошибок из подключенного инструмента мониторинга и рассуждениях о первопричинах из только что проведенного сеанса. Благодаря артефактам вам не нужно подключать источники данных или создавать инфраструктуру. Вы запрашиваете страницу, и Claude Code создает ее на основе того, что уже есть.

Живые страницы, которые обновляются на месте

When Claude Code updates an artifact, the open page refreshes in place and teammates see the updates the moment they're published. Every publish is a new version at the same link, with version history so you can restore at any time, and a gallery lets you browse and manage all artifacts you've made.

From our internal testing, one of our most common use cases has been debugging. These typically look something like: An engineer kicks off an incident investigation before standup. Claude Code works through the logs and publishes an artifact: a timeline, the suspect commits, and an error-rate chart. She shares the link with her team from the page header. By the time standup begins, Claude has republished it twice as the investigation progressed, incorporating the latest information. With artifacts, team members and stakeholders don't have to "walk us through what the agent found" because they're all looking at the same view, with the same context.

Private to your organization

lever toggle and role-based scoping, set retention policies, and get org-wide visibility through the compliance API.

Getting started

Ask your session for an artifact — or just ask for something visual, here are some ideas by role:

- **Legal / open source:** A license audit of every dependency, flagging copyleft, straight from the repo. *"Build an artifact listing every third-party dependency and its license, flagging anything copyleft."*
- **Privacy:** A data-flow map of where personal data is collected, stored, and logged across the code. *"Trace where we touch personal data across the codebase into an artifact for the privacy review."*
- **Security:** Findings that link to the exact line, so the fix is unambiguous. *"Build an artifact of the auth findings from this review, each linked to the code."*
- **FinOps / platform finance:** Cloud resources and cost drivers mapped from your infrastructure-as-code. *"Map our cloud resources from the Terraform into an artifact, grouped by service, with the big cost drivers."*
- **Software engineers:** A PR or bug walkthrough reviewers can actually follow, pulled from the diff and the code around it. *"Make an artifact walking through this PR — the diff, the reasoning, and what I tested."*
- **Designers & frontend engineers:** Several UX directions for a screen, each built from your real components so the one you pick is

"Map how the payments service fits together into an artifact, from the code."

- **SRE & on-call:** An incident page that grows as you investigate and becomes the postmortem. "Turn this incident into an artifact — timeline, suspect commits, error spike from our monitoring — and republish as I work through it."
- **Engineering managers:** A page of what actually shipped, built from the merged PRs. "Build an artifact of what merged on my team this week from the PRs, grouped by project."

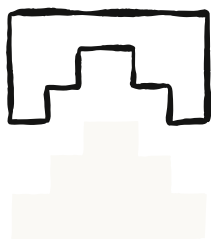

Claude Code builds the page and gives you a link. Open it in your browser or the desktop app, share it from the header—updates publish to the same URL automatically.

Availability

Artifacts is available in beta to Claude Team and Enterprise orgs, from the Claude Code CLI and desktop app, with pages viewable in any browser.
