The danger is not only bad generated code. It is convincing generated code built around the wrong explanation.

Production occasionally contains duplicate orders.

The service already looks as though it should prevent them:

```
const existing = await orderRepository.findOne({
  where: { externalId },
});

if (existing) {
  return existing;
}
return orderRepository.save({
  externalId,
  customerId,
});
```

A developer gives the code to an AI coding agent with a simple instruction: prevent duplicate orders. The agent responds quickly. It strengthens the lookup, extracts validation, improves error handling, adds tests, and perhaps suggests checking uniqueness more consistently before saving.
