Building software on a model that changes every six weeks breaks the one assumption the whole discipline was built on.

Boris Cherny built Claude Code. In late July, a few days after Opus 5 shipped, he stood in front of a room of founders and told them to delete their configuration files.

“For everyone that isn’t building agentic products, but you’re using Claude Code, every 6 months delete your Claude MD. Delete your skills. Delete your hooks. See what the model does.”

In any other engineering discipline that sentence ends a career. Nobody says: throw away your build configuration twice a year and see what happens. Configuration is where knowledge goes to be preserved.
