The architecture of agent recovery is well covered. The interface almost nobody designs is the one the user is left staring at.

An agent is running a pre-call workflow for a sales rep. Seven steps.

1. Research the competitors and their pricing ✅
2. Build the comparison doc ✅
3. Share it with the customer ✅
4. Update the CRM ❌
5. Draft the follow-up email
6. Schedule the call
7. Post a summary to Slack

Step four fails. The rep opens the tab and sees this:

Something went wrong. Try again.

The customer already has a pricing comparison in their inbox. The CRM has no record of any of it. Steps five through seven never happened, so no follow-up exists
