In May 2026 a team at Multiverse Computing took Meta’s Llama 3.1 8B-Instruct, opened up one of its frozen projection layers, and wired a quantum circuit into the model’s forward pass. The circuit did not run in a simulator. It ran on IBM Quantum System Two, a 156-qubit Heron r2 processor, executing thousands of circuits on actual superconducting hardware while the model produced tokens.

Perplexity on WikiText moved from 8.877 to 8.752.

That is a 1.4% improvement, and it is the single most concrete answer anyone has
