В [рассылке за эту неделю](#) я задал тренерам по психологической подготовке вопрос: какую самую незначительную привычку, по вашему мнению, стоило бы перенять игрокам (или людям в целом), чтобы она оказала наибольшее влияние? Вот три моих любимых ответа.

1. Пять-десять минут тишины и уединения

Адам Бернеро, тренер по психологической подготовке команды «Сиэтл Маринерс», практически умоляет своих игроков делать это.

«Просто проведите пять-десять минут наедине с собой, без телефона, — говорит он им. — Просто постарайтесь, чтобы ваше тело и разум были спокойны».

Бернеро выступал в высшей лиге на протяжении семи сезонов. Это его восьмой сезон в качестве тренера по психологической подготовке «Маринерс», и за это время он понял, что игроки часто сопротивляются, когда он предлагает им помедитировать.

Вместо этого он предлагает пять минут спокойного времяпрепровождения в качестве простого «шага номер один».

Он советует игрокам убрать телефон в другую комнату, найти тихое место и просто посидеть — в идеале от пяти до десяти минут.

нужно уделять время самим себе, а мы этого больше не делаем».

Джули Элион, которая работает с некоторыми ведущими гольфистами PGA Tour, недавно сделала нечто подобное с одним из своих подопечных. Она попросила его установить таймер на две минуты («Я хотела на пять», — сказала она), затем положить телефон и просто посидеть, погрузившись в свои мысли.

«Любая мысль — я в этом не сильна, это бред — почему Джули заставляет меня это делать, у меня болит спина — любая мысль, просто заметьте, что это мысль, — сказала она. — Если у нас есть мысль, которая просто тратит нашу энергию, нам нужно потренироваться очищать пространство в голове, чтобы мы могли, черт возьми, попасть мячом в лунку».

КОНТЕНТ ВЫСШЕЙ ЛИГИ

практика и повторение.

“Trust me, I’m still working on this, but we’re in charge of our own reality,” she said. “If we want to create either the best place to perform or the best place to be loving to our families or the best place to relax, we’re responsible for our headspace. But we have to work at it.

“It is a muscle. It comes easier to some of us — and for most professional athletes, it does not come easy — but if you work at it, you can learn how to hold only relevant information and let everything else go.”

The one thing a mental performance coach has found to be most disruptive

Elise Devlin

2. A form of daily journaling

This one came up a lot.

Traci Statler, a mental performance coach for the Philadelphia Phillies, has players she works with use a form of journaling she calls P.O.V.

Here's how it works:

- The P stands for plan. She wants her athlete to come up with a plan every day. It must be a granular, achievable goal.
- The O is the outcome of that day's goal. Did your plan work? Why or why not?
- Then she has them look at the value of that day. What was accomplished?

One common mistake: Athletes sometimes set their goals too far in the distance, making them unachievable that day. A pitcher recovering from major surgery can't make his goal to throw a 95 mph fastball. But he can try to increase his range of motion in his elbow by two degrees that day.

"I would love it if everybody would just set a daily intention," she said. "And then legit come back to it, follow up, ask yourself how you did and then make an

Dr. Fayyadh Yusuf works with athletes, including [Seahawks kicker Jason Myers](#), as well as with surgeons. He encourages his clients to write down their thoughts about their performance that day: three things they liked and one thing they want to improve.

Over time, this helps athletes (and people):

- Establish and recognize patterns and themes. “If you don’t know what you need to improve,” Yusuf said, “it is a way to highlight it.”
- Recognize what they bring to the table — their strengths and skills. “I want you to know those things so when it’s game time you focus on those strengths,” he said.
- Hold themselves accountable. “Are you really putting the time and the work in?” he said. “Are you really doing what you’re supposed to?”

3. Focus on behaviors and actions, not feelings

Travis Thomas, a former mental performance coach for the United States men’s national team, has heard some version of this countless times:

Player X is a great player. They just lack confidence, and their lack of confidence is holding them back.

“The more and more I do this work, the more I’m not sure that that is a healthy or necessary focus,” Thomas said. “I actually think it becomes a distraction.”

To prove it, Thomas asks a series of follow-up questions:

“Have you ever felt confident before a competition and done poorly?”

Most athletes laugh and say yes.

“Have you ever felt really nervous or hesitant before a performance and done really well?”

Again, most say yes.

Then Thomas makes his point: “So what do feelings or confidence have to do with it?”

to get three shots in a half.

“Now they’re focused on the behavior of getting those three shots,” Thomas said.
“They’re out of their head thinking about their feelings.

“Their feelings are their feelings, and they’re valid. But for performance, we want to shift our focus off our feelings and focus on our behaviors and actions.”
