Добавить в закладки: бесплатные курсы по искусственному интеллекту на 2026 год

Практическое руководство по лучшим бесплатным курсам, инструментам и программам обучения в области искусственного интеллекта от компаний и университетов, определяющих развитие этой сферы.

МНЕНИЕ ИСКУССТВЕННОГО ИНТЕЛЛЕКТА
1 ИЮНЯ 2026 ГОДА

Я постоянно сталкиваюсь с одной и той же проблемой при обучении искусственному интеллекту.

Курсы есть везде.

У Google есть курсы. У Microsoft есть курсы. У OpenAI есть академия. У

университетские материалы. У Hugging Face есть открытые курсы. На YouT есть лекции мирового уровня.

Но длинный список ссылок — это не то же самое, что план обучения.

Поэтому я сделал это в виде карты.

Не по компаниям.

А по тому, что вам действительно нужно изучить в первую очередь.

Начните с основ ИИ. Затем изучите большие языковые модели. Затем пром
Затем агентов. Затем автоматизацию, RAG, MCP, Claude Code и
производственные системы ИИ.

После каждого раздела я также добавил свои собственные руководства по
Opinion AI. Бесплатные ресурсы, приведенные ниже, — это исходный матер
для обучения. В своих руководствах я стараюсь систематизировать, упрости
объединить лучшие идеи в одну практическую систему.

Подписка за 10 долларов дает доступ к 74 практическим руководствам по
искусственному интеллекту, посвященным агентам, Claude, Codex, MCP, RA
автоматизации, программированию, рабочим процессам, бизнес-сценариям
тем аспектам ИИ, которые действительно полезны для работы.

Введите свой адрес электронной п

Подписка

На некоторых ресурсах может потребоваться бесплатная регистрация.
Некоторые сертификаты могут стоить денег. Меня больше интересует
бесплатный доступ к обучению, чем сертификаты.

1. Сначала изучите основы искусственного интеллекта

Этот уровень не связан с программированием. Он связан с пониманием того, такое искусственный интеллект, в каких случаях он помогает, а в каких — не помогает, и как его использовать, не поддаваясь ажиотажу.

Лучшие бесплатные ресурсы

Elements of AI

<https://www.elementsofai.com/>

Google AI Training

<https://grow.google/ai/>

Искусственный интеллект IBM SkillsBuild

<https://skillsbuild.org/adult-learners/explore-learning/artificial-intelligence>

Microsoft AI для начинающих

<https://microsoft.github.io/AI-For-Beginners/>

Ресурсы Meta по искусственному интеллекту

<https://ai.meta.com/resources/>

Мой совет прост.

Сначала изучите «Элементы искусственного интеллекта». Затем пройдите к Google по искусственному интеллекту. А если хотите углубиться в тему, пройдите курс Microsoft «Искусственный интеллект для начинающих».

Далее прочтите руководство по искусственному интеллекту

Если вам нужна упрощенная схема основных идей, прочтите:

24 концепции искусственного интеллекта, которые необходимо изучить в 2024 году

Порожняя карта для инженеров в области ИИ на 2026 год

ИИ шаг за шагом: руководство для начинающих

<https://substack.com/@opinionai/p-193359936>

2. Узнайте, как работают большие языковые модели

Большие языковые модели — это основа ChatGPT, Claude, Gemini, DeepSeek Llama и многих других инструментов искусственного интеллекта.

Вам не нужно разбираться во всех математических деталях.

Но вам следует знать о токенах, контекстных окнах, трансформерах, обучении тонкой настройке, аргументации, галлюцинациях и о том, почему модель иногда звучит уверенно, хотя и ошибается.

Лучшие бесплатные ресурсы

Hugging Face LLM Course

<https://huggingface.co/learn/llm-course>

Intro to Large Language Models

Stanford CS25: Transformers United

<https://stanford-cs25.github.io/>

MIT Artificial Intelligence

<https://ocw.mit.edu/courses/6-034-artificial-intelligence-fall-2010/>

Build a Large Language Model from Scratch

<https://github.com/rasbt/LLMs-from-scratch>

This is the layer that makes everything else easier.

Once you understand LLMs, prompting makes more sense. Agents make more sense.
RAG makes more sense.

Build Your Own GPT-Style Model From Scratch

<https://substack.com/@opinionai/p-199778230>

3. Learn prompting as work design

Prompting is not magic wording.

It is task design.

Good prompting means giving the model context, role, examples, constraints, ou format, and a way to check its own work.

This is the skill every reader should learn, even if they never write code.

<https://substack.com/@opinionai/p-198299761>

4. Learn AI agents

This is the most important category right now.

A chatbot answers.

An agent works through steps.

It can plan, use tools, call APIs, search files, run code, check results, and continue task.

This is where AI starts moving from conversation to work.

<https://substack.com/@opinionai/p-194698145>

5. Learn automation and workflows

This is where AI becomes useful for business.

Not in a demo.

Research flows. Email flows. Lead flows. Content flows. Reporting flows. Custom support flows. Invoice checks. Meeting summaries. Internal dashboards.

Agents need workflows around them.

<https://substack.com/@opinionai/p-196378189>

6. Learn Claude and Claude Code

Claude is becoming one of the most useful AI systems for writing, research, coding documents, analysis, and agentic work.

Claude Code is even more important because it shows where coding is going.

The old way was writing every line yourself.

The new way is setting context, giving rules, checking changes, and letting the code agent work inside a clear system.

Claude Opus 4.8 Setup Guide

<https://substack.com/@opinionai/p-199896581>

7. Learn MCP and tool-connected AI

MCP means Model Context Protocol.

Simple meaning: it helps AI systems connect to tools, files, databases, apps, and services in a cleaner way.

This matters because AI is leaving the empty chat box.

The next layer is connected AI.

AI that can use tools.

AI that can read your files.

AI that can work inside your software.

AI that can call the right system at the right time.

Best free resources

Anthropic MCP Course

<https://anthropic.skilljar.com/introduction-to-model-context-protocol>

DeepLearning.AI MCP with Anthropic

<https://www.deeplearning.ai/courses/mcp-build-rich-context-ai-apps-with-anthropic>

OpenAI Tools Docs

<https://platform.openai.com/docs/guides/tools>

Google Gemini Function Calling

<https://ai.google.dev/gemini-api/docs/function-calling>

Learn MCP because it is part of the agent infrastructure story.

Not every reader needs to build MCP servers today.

But every serious AI learner should understand what it means.

<https://substack.com/@opinionai/p-194485999>

How to Build Claude Plugins

<https://substack.com/@opinionai/p-199422101>

8. Learn RAG and AI memory

RAG means Retrieval Augmented Generation.

Simple meaning: the model does not only answer from its training. It retrieves useful information from your files, database, docs, notes, or knowledge base before answering.

This is how AI becomes useful inside a real company.

A model alone does not know your refund policy, bakery process, product list, menu notes, customer emails, or internal SOPs.

RAG gives AI access to the right knowledge.

Best free resources

Pinecone RAG Guide

<https://substack.com/@opinionai/p-195033225>

Karpathy's AI Second Brain

9. Learn machine learning and AI engineering

You can use AI without becoming a machine learning engineer.

But if you want deeper understanding, this layer matters.

Machine learning teaches you the older foundation.

AI engineering teaches you how to build systems that actually work.

Testing. Evaluation. Deployment. Monitoring. Cost. Safety. Data. Feedback loops.

This is where serious builders should spend time.

LangChain Academy

<https://academy.langchain.com/>

Pick one serious path.

Finish it slowly.

Do not jump between ten tabs.

Opinion AI guide to read next

The 2026 AI Engineer Roadmap

<https://substack.com/@opinionai/p-195664048>

OpenAI Codex Master Guide

<https://substack.com/@opinionai/p-196134692>

Vibe Coding: The Complete Beginner's Guide

<https://substack.com/@opinionai/p-194805216>

The simple path I would follow

Here is the clean order.

Week 1: Elements of AI

Week 2: Google AI Training or IBM SkillsBuild

Week 3: Hugging Face LLM Course

Week 4: OpenAI and Anthropic prompting guides

Week 5: Hugging Face Agents Course

Week 6: Microsoft AI Agents for Beginners

Week 7: n8n or Make Academy

Week 8: Pinecone or LlamaIndex RAG guide

Week 9: Anthropic Academy and Claude Code docs

Week 10: MCP documentation

Week 11: Google Machine Learning Crash Course

Week 12: Made With ML or Full Stack Deep Learning

That is enough to build a serious foundation.

Not a fake AI guru foundation.

A useful one.

My honest take

Free AI education is already good enough to start.

The issue is not access.

The issue is order.

If you only save links, nothing changes.

If you follow a path, build small things, and keep connecting the pieces, your understanding compounds.

Start with basics.

Then LLMs.

Then prompts.

Then agents.

Then workflows.

Then RAG and MCP.

Then production thinking.

That is the whole purpose of this newsletter.

To take the messy AI world and turn it into something a normal serious reader can actually use.
