

Дорожная карта Claude, которую я составил для вас: бесплатный пост

Практический подход к изучению Claude с тремя направлениями для разных читателей: от новичков и владельцев бизнеса до разработчиков, студентов, основателей и специалистов по искусственному интеллекту.

МНЕНИЕ ИСКУССТВЕННОГО ИНТЕЛЛЕКТА
20 МАЯ 2026 ГОДА

Прикрепляю это к началу публикации. Архив Клода разросся до четырнадцати частей, и новичку будет непросто в нем разобраться. Читатели постарше спрашивают, что они упустили. А новички — с чего вообще начать.

Итак, этот пост — отредактированная версия. Не новая статья. Карта чтения которой можно вернуться.

Я разделила все на три раздела в зависимости от того, насколько глубоко вы погрузились в работу с Claude. Выберите раздел, который подходит именно прочтите его от начала до конца. В самом конце есть быстрый поиск по персонажам, если вам нужен однострочный ответ для вашей конкретной ситуации.

Трек 1: Если имя Клода вам ни о чем не говорит

Этот трек для тех, кто столько раз слышал слово Claude, что, кажется, должно знать, что это такое. Никакого кода. Никакого давления со стороны разработчиков. Только общая информация и несколько вещей, которые вы

Во-первых, общая информация

Claude — это уже не один продукт. Это набор продуктов, объединенных одним мозгом: Chat, Projects, Artifacts, Cowork, Code, MCP, Managed Agents. Люди постоянно их путают. Эта часть — самая простая схема, которую я смог составить, чтобы показать, что представляет собой каждая часть и когда как их следует использовать. Если вы не читали ничего другого из этого трека, прочтите это. Это избавит вас от недель путаницы в будущем.

Прочтите это здесь:

Клод изменился. Как использовать его в мае 2026 года

МНЕНИЕ ИСКУССТВЕННОГО ИНТЕЛЛЕКТА • 13 МАЯ

Восемь дней назад компания Anthropic запустила Claude for Financial Services. Десять ИИ-агентов созданы для выполнения рутинной и трудоемкой работы, которой банкиры занимаются каждый день. Их уже используют Goldman Sachs, Vantage, Citi. Почти половина крупнейших клиентов Anthropic — финансовые организации.

Что на самом деле нового в последней версии Claude

Каждые несколько месяцев Anthropic выпускает новую версию Claude, и всегда пытаются понять, что в ней изменилось. В этой статье Opus 4.7 объясняется простыми словами. Что стало лучше. Что осталось прежним. Что вы можете делать сейчас, чего не могли в прошлом месяце. Прочтите это один раз, и вы перестанете гадать, та ли у вас версия.

Клод. Опус 4.7: Всё важное

МНЕНИЕ ИСКУССТВЕННОГО ИНТЕЛЛЕКТА • 23 АПР.

На прошлой неделе компания Anthropic выпустила Claude Opus 4.7. Если вы читали только анонс, то вам может показаться, что обычное обновление модели с несколькими новыми столбцами на графике. Но это не так. Изменилось само использование Claude, и вы продолжите работать по-старому, то ли получите худшие результаты, либо будете и больше за ту же работу.

Когда Клод начинает кликать по экрану

Теперь Клод может управлять вашим компьютером. Он двигает мышкой, открывает приложения, нажимает на элементы, заполняет формы. Звучит дико, потому что так оно и есть. В этом посте мы подробно расскажем, что такое «Использование компьютера», как его включить и что делать в первую очередь, чтобы ничего не пошло не так. Не пропускайте этот пост только потому, что кажется сложным. Настройка проще, чем кажется.

Designing things without being a designer

Landing pages. Slide decks. Social graphics. Brand visuals. All the stuff you used need a Canva subscription and a bit of taste for. Claude can handle most of it now. The difference between average output and actually good output is mostly in how you things up. This piece walks you through that setup so you do not waste your first tries.

The small business starter pack

Fifteen workflows. Ten plus connectors. Thirty minute setup. This is the closest in the archive to a starter pack for owners running a business solo or with a tiny Customer replies, invoices, social posts, scheduling, document drafts. Most of it run on Claude after one careful setup. If you only finish one piece in this track, n this one.

Track 2: If Claude is already in your daily routine

This track is for people who chat with Claude every day and want it doing real w the background. Automation. Connectors. The quiet workflows that save you ho every week.

Meet Cowork. your background worker

Cowork is the version of Claude that works for you instead of just chatting with you. It runs on a schedule. It handles files. It pulls from your connected apps and reports back. This piece is the entry level Cowork guide. It tells you what Cowork is and walks you through setting up your first useful workflow. Treat it as the floor before the rest of the pieces in this track.

Read it:

Let Claude Cowork Run Your Workflow: Practical Guide

OPINION AI • 7 APR.

Most people still use AI like a smarter search engine. They ask a question, get text back, then do the work themselves. Copy. Paste. Rename. Refor. Move files. Build the report. Send the follow-

The Cowork stuff nobody is using yet

This is where Cowork starts paying off. Thirty six specific commands and automations that most users have never tried. Most of them are nearly copy paste ready. The pattern I keep seeing is that people stop exploring Cowork after the first three workflows. This piece is the long tail of what it can actually do once you go past the front page.

Read it:

[36 Claude Cowork Commands, Workflows & Automations](#)

Claude Cowork only starts making sense when you stop treating it like a chat window.

MCP, explained without the jargon

MCP gets thrown around a lot lately and almost nobody explains it without sounding like a software manual. Short version: MCP servers are tiny bridges that let Claude connect to other tools. Your calendar. Your database. Your accounting software. Anything with an API. This piece explains the idea in plain words and then lists thirty-two servers that are actually worth plugging in right now.

Read it:

Top 32 MCP Servers to Make Claude Super Powerful

Honestly, here is the thing that bugs me.

The set it and forget it side of Claude

Managed Agents is the part of Claude that runs without you watching. You hand task, it runs on a schedule, it manages its own context, and it tells you when som needs your attention. This piece is the cleanest intro I have been able to write to agent side of Claude without slipping into buzzword soup. If the words AI agent always sounded vague to you, start here.

Read it:

Claude Managed Agents Explained

OPINION AI • 9 APR.

Anthropic's newest launch matters for a billion reason, and that is exactly why it feels important. Claude Managed Agents, released on April 8, in public beta, is not just another model update. It's Anthropic trying to remove the messy layer between a cool agent demo and something you can actually run in production.

[Read full story →](#)

Turning Claude into a content factory

This is the one for creators. A full pipeline for YouTube, Shorts, TikTok, and Twitter running on Claude. Script ideas, drafts, captions, repurposing, scheduling. Less about the theory of AI content and more about steady output. If your content production is currently a weekend scramble, this piece turns it into a quiet daily routine.

Track 3: If you are already building with Claude

This track is for the people writing code, shipping products, or putting AI features into real apps. The depth goes up here. So does the payoff.

Claude Code, end to end

This is the long one in the archive. It takes you from installing Claude Code on your laptop to actually shipping something you would be willing to put your name on. It covers the setup, the workflows, the prompts that work, and the patterns that quit fail. If you are going to use Claude Code at all, block out a slow afternoon and read the whole thing once. It will save you weeks of trial and error.

The sixty five line file that fixed everyone's Claude Code

Andrej Karpathy dropped a sixty five line CLAUDE.md file on GitHub and it hit number one with 136k stars in days. The reason is simple. It is four small rules that fixed Claude's coding mistakes by a real margin. This piece breaks down what the four rules are, why they work, and how to drop a CLAUDE.md into your own project this afternoon. Short read. Immediate payoff.

Read it:

Karpathy's Viral CLAUDE.md 4 Rules, Explained Simply

OPINION AI • 18 МАР

A 65-line markdown file should not feel like a complex development tool.

The case study every builder should read

A real story of a tiny Claude powered bot that went from a 300 dollar idea to 2.38 million dollars in four months. Half case study, half blueprint. It is not a get rich piece. It is a breakdown of the market gap, the actual strategy, and the specific role Claude played in making the whole thing work. Useful for builders, for founders, for anyone trying to figure out where the money is actually being made with AI right now.

Pick your path by who you are

If you skipped the tracks above and just want one line that tells you where to go:

Non-tech, business owner, just curious. Track 1, in order. The Small Business piece will give you the fastest “this is useful” moment.

Founder or solo operator. Read the Small Business and Design pieces from Track 1 first. Then jump to Track 2 and pick Cowork plus MCP. Then read the \$300 to \$2.38M case study. That is the founder loop.

Investor, or just watching the money side. Read the Opus 4.7 piece for the state of the market. Then the \$300 to \$2.38M case study to see what is actually possible right now. Then Managed Agents to understand where the spend is going.

Student or researcher (PhD level). Track 1’s overview piece for orientation. Then jump to Managed Agents, MCP Servers, and Claude Code Masterclass to see the system in action.

Developer or AI builder. Skip to Track 3. Then come back for MCP Servers and Managed Agents in Track 2 when you need integrations.

Already shipping with Claude. Track 3 only. Read in order. Then the \$300 to \$2.3 piece for ideas on what is possible with a small focused build.

One last thing

That is the whole shelf. Bookmark this page, share it with anyone who keeps asking you where to start with Claude, and come back to it when a new piece drops because I will keep updating this map as the archive grows.

Reading order matters less than reading the right one for where you are right now. Pick one and go.
