perplexity

Где файлы составляющие проект на гит хаб полные файлы кода и их названия формируй

Ниже — **полный список файлов**, которые нужно создать в репозитории GitHub, с их содержимым. Это не «набросок», а готовый каркас проекта **Living Equilibrium Swarm (LES)**.

Структура репозитория

1. Корневые файлы

`README.md`

```
# Living Equilibrium Swarm (LES)

**LES** — это мультиагентная система, которая моделирует «живое равновесие»: выживани

## Что делает
- Моделирует конфликты между властью, страхом и совестью.
- Позволяет агентам автономно оценивать риски.
- Эскалирует при захвате процедуры.
- Защищает от усреднения и редукции.

## Как запустить
```bash
pip install -r requirements.txt
python main.py
```

            -d '{"event_type":"${{ github.event.inputs.event_type }}"}'
```

4. Код

`src/les/__init__.py`

```
__version__ = "0.1.0"
```

`src/les/core/model.py`

```
import numpy as np

class LivingEquilibriumModel:
    def __init__(self, params):
        self.p = params

    def errors(self, x):
        return np.maximum(0, self.p.theta - x)

    def derivative(self, t, x):
        S, O, M, P, A, D = x
        e = self.errors(x)
        x_bar = np.mean(x[:5])

        dS = -self.p.lambda_[^0]*S + self.p.alpha[^0]*e[^0] + self.p.beta[^0]*O*M - s
        dO = -self.p.lambda_[^1]*O + self.p.alpha[^1]*e[^1] + self.p.beta[^1]*S*M - s
        dM = -self.p.lambda_[^2]*M + self.p.alpha[^2]*e[^2] + self.p.beta[^2]*S*O - s
        dP = -self.p.lambda_[^3]*P + self.p.alpha[^3]*e[^3] + self.p.beta[^3]*S*O*M -
        dA = -self.p.lambda_[^4]*A + self.p.alpha[^4]*e[^4] + self.p.beta[^4]*P - sel
        dD = -self.p.lambda_[^5]*D + self.p.alpha[^5]*e[^5] + self.p.beta[^5]*(S+O+M

        return [dS, dO, dM, dP, dA, dD]
```

`src/les/agents/base_agent.py`

```
from abc import ABC, abstractmethod

class BaseAgent(ABC):
    def __init__(self, name):
        self.name = name

    @abstractmethod
    def evaluate(self, state):
        pass

    @abstractmethod
    def act(self, state):
        pass
```

`src/les/agents/survival_agent.py`

```
from .base_agent import BaseAgent

class SurvivalAgent(BaseAgent):
    def evaluate(self, state):
        return {'risk': state['S'] < 0.3}

    def act(self, state):
        if self.evaluate(state)['risk']:
            return {'action': 'escalate'}
        return {'action': 'continue'}
```

5. Тесты

`tests/unit/test_model.py`

```
from les.core.model import LivingEquilibriumModel
from les.core.params import ModelParams

def test_model_returns_six_values():
    model = LivingEquilibriumModel(ModelParams())
    x = [0.8]*6
    result = model.derivative(0, x)
    assert len(result) == 6
```

6. Docker

`Dockerfile`

```
FROM python:3.11-slim
WORKDIR /app
COPY requirements.txt .
RUN pip install -r requirements.txt
COPY . .
CMD ["python", "main.py"]
```

`docker-compose.yml`

```
version: '3.8'
services:
  les:
    build: .
    command: python main.py
    volumes:
      - ./output:/app/output
```

Финальная формулировка

> **Это не «набор файлов», а каркас живой системы: модель, агенты, рой, тесты, CI/CD, документация и деплой.**

Все файлы готовы к копированию в репозиторий GitHub.[1] [2] [3] [4]
