Important Slash Prompts For Productivity, Learning, & Coding

28 June 2026 by [Tanveer Ahmed](#)

Claude AI can be much more useful when you know how to ask the right way. Many beginners open Claude and type something simple like “help me study” or “write code.” It may still answer, but the response often feels too broad or generic.

A better method is to use short, command-style Claude AI prompts.

These prompts work like shortcuts. They tell Claude what kind of response you want before you give the full task. For example, instead of writing, “Help me plan my day,” you can write:

“/plan Create a daily plan for my study, work, and gym routine.”

This makes your request clearer. Claude understands that you want a plan, not just general advice.

In this guide, you will learn practical Claude AI prompt commands for productivity, Learning, thinking, coding, output formatting, and business strategy. For each prompt, you will see what it does, how to use it, and where it can help.

11. FAQs

What Are Claude AI Prompt Commands?

Claude AI prompt commands are short instructions that guide Claude toward a specific type of answer. They are not official “magic codes.” They are simply a cleaner way to tell Claude what you need.

A basic command-style prompt has two parts:

Command + Task

Example:

“/learn Explain machine learning in simple words.”

In this example, **/learn** tells Claude the response should be educational. The rest of the prompt explains the actual task.

This approach is helpful because it removes confusion. Claude does not have to guess whether you want a summary, a roadmap, a checklist, or a detailed explanation.

How to Use These Claude AI Prompts

The best way to use these prompts is to add your own topic, goal, audience, or context after the slash command.

Use this simple format:

/command + task + context + desired output

Example:

"/roadmap Create a 30-day roadmap to learn Python for data science. Keep it beginner-friendly."

This is much stronger than only writing:

"Teach me Python."

The improved prompt tells Claude four important things:

- The answer should be a roadmap.
- The topic is Python.
- The goal is data science.
- The level should be beginner-friendly.

That is how you get more useful AI answers.

Claude AI Prompts for Productivity

Productivity prompts help you organize your day, manage tasks, build routines, and stay focused. These are useful for students, freelancers, office workers, bloggers, and business owners.

1. /plan

What it does: Creates a daily plan.

Use **/plan** when you have several tasks and want Claude to organize them into a clear routine.

Example prompt:

"/plan Create a daily plan for studying Python, writing one blog post, and doing 1 hour of exercise."

This prompt is useful when your day feels messy, and you need a simple structure.

2. /weekly

What it does: Creates a weekly plan.

Use **/weekly** when your goal needs more than one day. It can help with study schedules, content planning, fitness routines, or project work.

Example prompt:

"/weekly Create a weekly study plan to learn Claude AI prompts and Python basics."

This is best for long-term goals that need consistent progress.

3. /prioritize

What it does: Helps you decide what to do first.

Use **/prioritize** when your task list is long, and you feel confused about where to start.

Example prompt:

"/prioritize Arrange these tasks by importance: keyword research, blog writing, image design, internal linking, and publishing."

This is helpful for bloggers, marketers, freelancers, and students managing multiple tasks.

4. /focus

What it does: Helps reduce distractions.

Use **/focus** when you need a focused work session or a distraction-free routine.

Example prompt:

"/focus Create a 2-hour deep work routine for writing a blog without distractions."

This works well if you often lose time on social media, notifications, or multitasking.

5. /automate

What it does: Suggests automation ideas.

Use **/automate** when you repeat the same tasks again and again, and want to save time.

Example prompt:

"/automate Suggest automation ideas for my blog writing and social media posting workflow."

This is useful for marketers, bloggers, business owners, and virtual assistants.

6. /delegate

What it does: Helps decide what tasks to hand over.

Use **/delegate** when you want to know which tasks you should do yourself and which tasks can be assigned to someone else.

Example prompt:

"/delegate Review my task list and tell me which tasks I can delegate to a freelancer."

This is useful for business owners, team leaders, agencies, and busy freelancers.

7. /habits

What it does: Builds a habit plan.

Use **/habits** when you want to create a small routine and follow it consistently.

Example prompt:

"/habits Create a simple habit plan to study AI for 30 minutes every day."

This is best for students and self-learners who want steady improvement.

8. /track

What it does: Creates a tracking system.

Use **/track** when you want to measure your progress over time.

Example prompt:

"/track Create a weekly tracking system for my blog writing, keyword research, and publishing tasks."

This is useful for goals, projects, study routines, fitness plans, and business tasks.

9. /timeblock

What it does: Builds a time-blocking schedule.

Use **/timeblock** when you want to divide your day into focused work blocks.

Example prompt:

"/timeblock Create a time-blocking schedule from 9 AM to 6 PM for writing, editing, SEO, and learning."

This is helpful for people who want to manage time more intentionally.

10. /review

What it does: Reviews your progress.

Use **/review** at the end of the day or week to understand what went well and what needs improvement.

Example prompt:

"/review Review my weekly progress based on these completed tasks and suggest improvements."

This is useful for anyone who wants to improve performance instead of repeating the same mistakes.

Claude Prompts for Learning

Learning prompts are ideal for students, beginners, and self-learners. You can use them to understand difficult topics, create notes, revise lessons, and test your knowledge.

11. /learn

What it does: Explains a topic.

Use **/learn** when you want Claude to teach you something from the beginning.

Example prompt:

"/learn Explain artificial intelligence in simple words for a beginner."

This is useful for students learning a new subject for the first time.

12. /resources

What it does: Suggests learning resources.

Use **/resources** when you need books, websites, YouTube channels, courses, or tools for learning a topic.

Example prompt:

`"/resources Suggest free beginner-friendly resources to learn machine learning."`

This is helpful when you do not know where to start.

13. /practice

What it does: Creates practice questions.

Use **/practice** after studying a topic. It helps you test whether you actually understood the lesson.

Example prompt:

`"/practice Create 10 practice questions on Python loops with answers."`

This is useful for students, exam preparation, and interview practice.

14. /quiz

What it does: Tests your knowledge.

Use **/quiz** when you want Claude to act like a teacher and ask you questions.

Example prompt:

`"/quiz Test my knowledge of data science basics with 10 multiple-choice questions."`

This is useful for revision and quick self-testing.

15. /mistakes

What it does: Shows common mistakes.

Use **/mistakes** before learning a topic or starting a project. It helps you avoid problems early.

Example prompt:

`"/mistakes List common mistakes beginners make while learning Python."`

This is great for beginners because it helps prevent repeated errors.

16. /summary

What it does: Summarizes long content.

Use **/summary** when you have a long article, lecture, or note and want the main points only.

Example prompt:

`"/summary Summarize this article in 5 bullet points: [paste article]."`

This is useful for students, researchers, bloggers, and busy readers.

17. /revision

What it does: Creates quick revision material.

Use **/revision** before exams, interviews, presentations, or tests.

Example prompt:

“/revision Give me a quick revision guide for machine learning basics.”

This is best for last-minute study.

18. /notes

What it does: Creates structured notes.

Use **/notes** when your content is messy, and you want it organized with headings and bullet points.

Example prompt:

“/notes Turn this lecture into structured notes with headings and bullet points.”

This is helpful for students and online learners.

19. /examples

What it does: Gives real examples.

Use **/examples** when a concept feels too abstract or theoretical.

Example prompt:

“/examples Give real-life examples of artificial intelligence in healthcare, education, and business.”

This makes difficult topics easier to understand.

20. /explain why

What it does: Explains the reason behind something.

Use **/explain why** when you do not only want the answer. You also want to understand the logic.

Example prompt:

“/explainwhy Explain why Python is popular for data science.”

This is useful for deeper Learning and reasoning.

Claude Prompts for Thinking Styles

Thinking-style prompts help you analyze ideas, compare options, find weak points, and improve your decision-making.

21. /analyst

What it does: Provides deep analysis.

Example prompt:

“/analyst Analyze my blog topic and explain its SEO potential, audience, and content gaps.”

This is useful for research, planning, and strategy.

22. /critic

What it does: Finds flaws.

Example prompt:

"/critic Find weaknesses in this blog outline and suggest what is missing."

This is helpful when you want honest feedback before publishing or presenting something.

23. /optimizer

What it does: Improves existing content or ideas.

Example prompt:

"/optimizer Improve this blog introduction and make it more engaging."

Use this when your draft is already written but needs polish.

24. /simplify

What it does: Makes an explanation easier.

Example prompt:

"/simplify Explain prompt engineering in simple words for a student."

This is useful for learning difficult topics.

25. /eli5

What it does: Explains something in a very simple way.

Example prompt:

"/eli5 Explain machine learning like I am 5 years old."

This is best when you need a basic understanding before going deeper.

26. /deepdive

What it does: Gives a detailed explanation.

Example prompt:

"/deepdive Explain how large language models work with examples."

Use this when you want more depth, not just a short answer.

27. /compare

What it does: Compares two or more options.

Example prompt:

"/compare Compare Claude AI and ChatGPT for content writing."

This helps when you need to choose between tools, ideas, or methods.

28. /proscons

What it does: Lists advantages and disadvantages.

Example prompt:

"/proscons List the pros and cons of using AI for blog writing."

This is useful for balanced decision-making.

29. /firstprinciples

What it does: Breaks a topic down to its basics.

Example prompt:

"/firstprinciples Explain digital marketing from the basic principles."

Use this when you want to understand the foundation of a concept.

30. /contrarian

What it does: Challenges an idea.

Example prompt:

"/Contrarian Challenge: My idea of writing a blog on Claude prompts and explaining possible problems."

This is useful when you want to test whether your idea is strong enough.

Claude Output Mode Prompts

Output mode prompts control the style, length, and structure of Claude's answer. Use them when Claude gives helpful information, but not in the format you want.

31. /ghost

What it does: Gives only the final answer.

Example prompt:

"/ghost Write only the final meta description for this blog title."

This is useful when you do not want an explanation.

32. /minimal

What it does: Gives the shortest possible answer.

Example prompt:

"/minimal Explain Claude AI prompts in one sentence."

Use this when you need a quick answer.

33. /brief

What it does: Gives a short answer in 3–5 lines.

Example prompt:

"/brief Explain how to use Claude for coding."

This is useful for summaries.

34. /expand

What it does: Gives a detailed explanation.

Example prompt:

"/expand Explain how Claude AI prompts can help students, coders, and marketers."

Use this for blog sections, guides, and detailed Learning.

35. /stepbystep

What it does: Explains a process in steps.

Example prompt:

"/stepbystep Show me how to write an SEO blog using Claude AI."

This is perfect for tutorials.

36. /checklist

What it does: Creates an actionable checklist.

Example prompt:

"/checklist Create a checklist before publishing a blog post."

This is useful for workflows and task completion.

37. /framework

What it does: Creates a structured system.

Example prompt:

"/framework Create a framework for writing better Claude AI prompts."

Use this when you want a repeatable method.

38. /blueprint

What it does: Creates an implementation plan.

Example prompt:

"/blueprint Create a complete plan to launch a tech blog."

This is useful for bigger projects.

39. /playbook

What it does: Builds a repeatable process.

Example prompt:

"/playbook Create a repeatable system for keyword research and blog writing."

This is useful for agencies, teams, and freelancers.

40. /roadmap

What it does: Creates timeline-based steps.

Example prompt:

"/roadmap Create a 30-day roadmap to learn Claude AI prompt writing."

This is best for learning plans and project timelines.

Claude Prompts for Coding and Tech

Coding prompts help with debugging, code cleanup, system design, APIs, databases, scalability, security, testing, and planning logic.

41. /debug

What it does: Finds bugs.

Example prompt:

"/debug Find the error in this Python code and explain the fix: [paste code]."

This is useful for beginner coders and debugging practice.

42. /refactor

What it does: Cleans up code.

Example prompt:

"/refactor Rewrite this JavaScript code in a cleaner and more readable way."

Use this when your code works but looks messy.

43. /optimizecode

What it does: Improves code performance.

Example prompt:

"/optimizecode Improve this Python function for better speed and readability."

This is useful when code is slow or inefficient.

44. /systemdesign

What it does: Plans software architecture.

Example prompt:

"/systemdesign Design the architecture for a simple blogging platform."

This is helpful for developers learning how applications are structured.

45. /api

What it does: Creates an API structure.

Example prompt:

"/api Create an API structure for a student notes app."

This is useful for backend developers and app planning.

46. /database

What it does: Designs a database.

Example prompt:

"/database Design a database schema for a blog website with users, posts, and categories."

This is helpful for web developers and database learners.

47. /scalability

What it does: Suggests a scaling approach.

Example prompt:

"/scalability Explain how to scale a website from 1,000 to 100,000 monthly visitors."

Use this when you want to understand how a project can grow.

48. /security

What it does: Checks for security risks.

Example prompt:

"/security Review this login system and list possible security risks."

This is useful for safer websites and applications.

49. /testcases

What it does: Generates test cases.

Example prompt:

"/testcases: Generate test cases for a user registration form."

This is helpful for developers and QA testers.

50. /pseudocode

What it does: Writes logic before code.

Example prompt:

"/pseudocode Write the logic for a simple calculator app."

This is useful when you want to plan the solution before writing real code.

Claude Prompts for Business and Strategy

Business prompts help with ideas, sales, offers, funnels, customer profiles, and growth strategy.

51. /startup

What it does: Generates startup ideas.

Example prompt:

"/startup Give me 10 startup ideas for students using AI."

This is useful for entrepreneurs and business learners.

52. /gtm

What it does: Creates a go-to-market plan.

Example prompt:

"/gtm Create a go-to-market plan for my AI learning website."

Use this when you want to launch a product, service, or website.

53. /monetize

What it does: Suggests revenue ideas.

Example prompt:

"/monetize Suggest ways to monetize a tech education blog."

This is useful for bloggers, creators, and startup founders.

54. /validate

What it does: Tests an idea before execution.

Example prompt:

"/validate Validate my idea for a Claude AI prompt guide website."

Use this before spending time or money on a new idea.

55. /icp

What it does: Creates an ideal customer profile.

Example prompt:

"/icp Create an ideal customer profile for my AI prompt writing service."

This is useful for marketing and sales planning.

56. /sales

What it does: Writes a sales pitch.

Example prompt:

"/sales Write a short sales pitch for my SEO blog writing service."

This is useful for freelancers and service providers.

57. /colddm

What it does: Writes cold outreach messages.

Example prompt:

"/colddm Write a short cold DM for offering blog writing services to tech startups."

This is helpful for lead generation and client outreach.

58. /offer

What it does: Creates a strong offer.

Example prompt:

"/offer Create a strong service offer for AI blog writing."

This is useful for freelancers, marketers, and agencies.

59. /funnel

What it does: Builds a funnel strategy.

Example prompt:

"/funnel Create a simple funnel for selling an AI prompt guide PDF."

This is useful for online products and marketing campaigns.

60. /retention

What it does: Gives retention ideas.

Example prompt:

"/retention Suggest ways to keep users coming back to my tech learning website."

This is helpful for blogs, newsletters, SaaS products, and online communities.

Best Way to Combine Claude Prompts

You do not always have to use one command at a time. You can combine commands when you want a more specific answer.

Example:

"/roadmap + /stepbystep Create a 30-day step-by-step roadmap to learn Python."

Another example:

"/critic + /optimizer Review my blog outline, find weak points, and improve it."

This works well because you are telling Claude both the thinking style and the output format.

Common Mistakes to Avoid

Avoid these mistakes when using Claude AI prompts:

- Using only the command without context
- Asking too many unrelated things in one prompt
- Not mentioning your audience
- Not asking for a clear format
- Copying the AI answer without reviewing it
- Not giving examples when the task is complex

Weak prompt:

"/blog Write about AI."

Better prompt:

"/stepbystep Write a beginner-friendly blog outline on Claude AI prompts. Target students, beginner coders, marketers, and freelancers. Include H2 headings, FAQs,

examples, and a conclusion.”

The better version gives Claude direction, audience, format, and purpose.

FAQs

What are Claude AI prompts?

Claude AI prompts are clear instructions you give to Claude to get a useful response. You can use them for learning, coding, productivity, content creation, research, business planning, and daily work.

What are the best Claude AI prompts for beginners?

The best Claude AI prompts for beginners are simple command-style prompts like **/learn**, **/summary**, **/quiz**, **/roadmap**, **/checklist**, and **/stepbystep**. These help Claude explain topics, create plans, summarize content, and give easy-to-follow answers.

How do Claude prompt commands work?

Claude prompt commands work by giving Claude a clear response direction. For example, **/summary** tells Claude to summarize, **/debug** tells Claude to find coding errors, and **/roadmap** tells Claude to create a step-by-step learning plan.

What are the best Claude prompts for learning?

The best Claude prompts for learning include **/learn**, **/resources**, **/practice**, **/quiz**, **/notes**, **/examples**, and **/revision**. These prompts help students understand difficult topics, create study notes, practice questions, and revise faster.

What are the best Claude prompts for coding?

The best Claude prompts for coding include **/debug**, **/refactor**, **/optimizecode**, **/api**, **/database**, **/security**, **/testcases**, and **/pseudocode**. These prompts can help beginner coders fix errors, improve code, plan APIs, and understand programming logic.

How can I write better prompts for Claude AI?

To write better prompts for Claude AI, include a clear command, topic, context, audience, and output format. For example: **/roadmap Create a 30-day beginner roadmap to learn Python for data science with daily tasks and practice ideas.**
