

Developer Toolkit for the AI Era

Learn to ship with confidence from code to production.

Thanks for downloading our Developer Toolkit for the AI Era!

The resources below are designed to help you ship AI features faster—with pipeline visibility, controlled rollouts, and LLM observability to stay in control of model and agent performance in production.

THIS KIT CONTAINS:

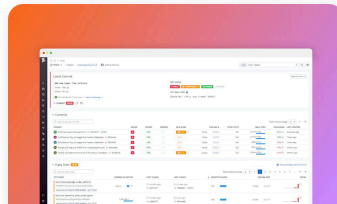

- **2 Product Briefs** on how to track every pipeline run and streamline your CI/CD with CI Pipeline Visibility and how to surface flaky tests, reduce test suite instability, and keep your pipelines unblocked with Test Optimization.
- **1 eBook** covering the future of AI, LLMs, and observability and how to instrument LLM calls and catch quality, latency, and cost regressions before users do.
- **1 On-Demand Webinar** on using CI Visibility, Test Optimization, and Feature Flags to measure DORA metrics, remove delivery bottlenecks, and ship with greater confidence as AI drives higher commit volume and faster release cycles.

CI Pipeline Visibility Product Brief

Track every pipeline run and streamline your CI/CD.

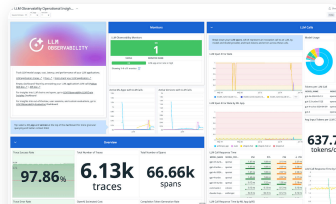

[READ](#)

CI Test Visibility Product Brief

Cut CI run times, surface flaky tests, and unblock pipelines.

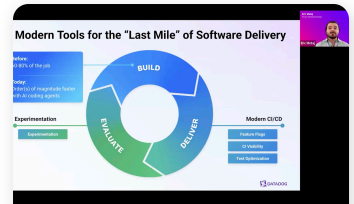

[READ](#)

The Future of AI eBook

Catch quality, latency, and cost regressions before users do.

[READ](#)

Software Delivery in the AI Era Webinar

Remove bottlenecks and ship with confidence.
