1 WHAT IS HTML?

HTML stands for HyperText Markup Language.

It is the standard language used to create the structure of web pages.

Used To Create:

- ✓ Headings
- ✓ Paragraphs
- ✓ Links
- ✓ Images
- ✓ Web Page Structure

2 HTML PAGE STRUCTURE

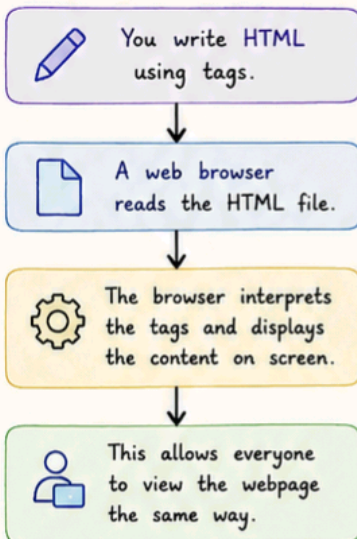

```
<!DOCTYPE html>
<html>
  <head>
    <title>My Page </title>
  </head>
  <body>
    <!-- Content goes here -->
  </body>
</html>
```

- ➔ **<head>** : Contains information about the page (not visible).
- ➔ **<body>** : Contains visible content on the page.

3 MOST USED TAGS

TAG	PURPOSE
<code><html></code>	Root element of an HTML page
<code><head></code>	Contains meta information
<code><title></code>	Title of the webpage
<code><body></code>	Visible content on the page
<code><h1> to <h6></code>	Headings
<code><p></code>	Paragraph
<code><a></code>	Link
<code></code>	Image

4 HOW IT WORKS

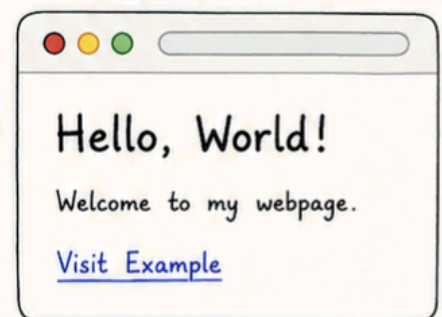

5 EXAMPLE

HTML CODE

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Page </title>
  </head>
  <body>
    <h1>Hello, World! </h1>
    <p>Welcome to my webpage. </p>
    <a href="https://example.com">
      Visit Example </a>
    </body>
</html>
```

OUTPUT IN BROWSER

6 TIPS TO REMEMBER

- ✓ Always close your tags.
- ✚ Use indentation to keep your code readable.
- `</>` Practice regularly.
- 💡 Build small examples and experiment.

Slide 2/5

1 ATTRIBUTES IN HTML

Attributes provide additional information about HTML elements.

Example:

```
<a href="https://example.com" target="_blank">
  Visit Example
</a>
```

- href = Link destination
- target = How to open the link

2 NESTING IN HTML

HTML elements can be placed inside other elements.

Example:

```
<div>
  <h1>Welcome</h1>
  <p>This is a paragraph.</p>
</div>
```

Proper nesting makes your HTML structure clean and readable.

3 COMMENTS IN HTML

Comments are not displayed in the browser. They help in understanding the code.

Example:

```
<!-- This is a comment -->
```

Useful for notes and explanations in code.

4 DOCTYPE DECLARATION

<!DOCTYPE html> tells the browser which version of HTML you are using.

Example:

```
<!DOCTYPE html>
```

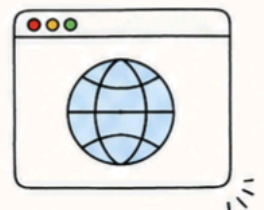

Always write it at the very top of your HTML file.

5 COMPLETE HTML TEMPLATE

```
<!DOCTYPE html>
<html>
  <head>
    <title>My First Page</title>
  </head>
  <body>
    <h1>Hello, World!</h1>
    <p>Welcome to my webpage.</p>
    <a href="https://example.com">Visit Example</a>
  </body>
</html>
```

WHAT HAPPENS?

- 1 Browser reads the HTML file.
- 2 Understands the structure.
- 3 Renders the content.
- 4 Displays the webpage to the user.

Slide 3/5

1 HTML HEADINGS

HTML headings are used to define the titles and subtitles on a page.

TAG	DESCRIPTION
<h1>	Most important heading
<h2>	Less important than h1
<h3> to <h6>	Least to least important

Use headings in proper order for better SEO and readability.

2 HTML TEXT FORMATTING

These tags are used to format text and make it more meaningful.

TAG	PURPOSE
	Bold text
<i>	Italic text
<u>	Underlined text
	Important text (bold)
	Emphasized text (italic)
 	Line break
<hr>	Horizontal rule

Note:

Use formatting tags carefully. Don't overuse them.

3 LISTS IN HTML

Lists help to organize related information in a structured way.

ORDERED LIST

```
<ol>
<li>Item 1</li>
<li>Item 2</li>
<li>Item 3</li>
</ol>
```

Uses numbers (1, 2, 3, ...)

UNORDERED LIST

```
<ul>
<li>Item 1</li>
<li>Item 2</li>
<li>Item 3</li>
</ul>
```

Uses bullets (•, ○, ■)

4 LINKS & IMAGES

```
<a href="https://example.com">
  Visit Example
</a>
```

- href : Link destination
- Opens the link in the same tab.

IMAGES

```

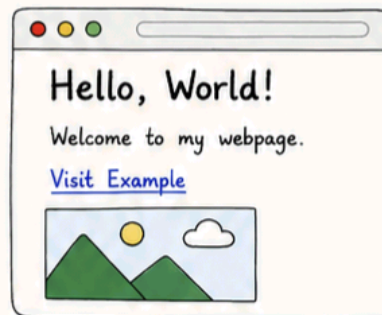

```

- src : Image path
- alt : Alternative text for the image

5 SIMPLE WEBPAGE EXAMPLE

```
<!DOCTYPE html>
<html>
<head>
<title>My First Page</title>
</head>
<body>
<h1>Hello, World!</h1>
<p>Welcome to my webpage.</p>
<a href="https://example.com">Visit Example</a>
<br>

</body>
</html>
```

OUTPUT IN BROWSER

This is how the webpage will appear in the browser.

QUICK TIPS

Always close
your tags

Use proper
indentation.

Keep your code
clean & readable.

Practice daily
and build small
projects.

Consistency
brings
mastery!

Slide 4/5

1 BLOCK vs INLINE ELEMENTS

BLOCK ELEMENTS

- Start on a new line.
- Take full width.
- Example: `<div>`, `<p>`, `<h1>`

INLINE ELEMENTS

- Do not start on a new line.
- Take only necessary width.
- Example: `<span>`, `<a>`, `<b>`

💡 Use block for layout and inline for small content.

2 HTML ENTITIES

Entities are special codes used to display reserved characters in HTML.

CHARACTER	ENTITY NAME	ENTITY CODE
<	Less than	<
>	Greater than	>
&	Ampersand	&
"	Double quote	"
'	Single quote	'

Entities prevent conflicts in HTML code. ★

3 DOCTYPE EXPLAINED

- `<!DOCTYPE html>` declares the document type.
- It helps the browser to understand the version of HTML.

Example:

```
<!DOCTYPE html>      <!-- HTML5 document -->
```

4 CHARACTER SET (META TAG)

The `<meta charset="UTF-8">` tag sets the character encoding for the document.

Example:

```
<head>
  <meta charset="UTF-8">
  <title>My Page</title>
</head>
```

5 HTML PAGE LIFECYCLE

1 Write HTML

Developer writes HTML code.

2 Save File

HTML file is saved with .html extension.

3 Open in Browser

File is opened in a web browser.

4 Browser Parses

Browser reads and understands the code.

5 Display Page

Browser renders and displays the webpage.

SUMMARY

- ✓ HTML creates the structure of web pages.
- ✓ Tags, attributes and elements work together.

- ✓ Browser reads HTML and shows the result.
- ✓ Practice is the key to become better!

- ✓ Learn a little every day and build amazing things.

Slide 5/5

1 HTML FORMS

Forms are used to collect input from users.

Example:

```
<form action="/submit" method="post">
  <label>Username:</label> <br>
  <input type="text" name="username"> <br>
  <label>Password:</label> <br>
  <input type="password" name="password"> <br>
  <button type="submit"> Submit</button>
</form>
```

Common Input Types:

text password email checkbox radio submit

💡 Always use <label> for better user experience.

2 TABLES IN HTML

Tables are used to display data in rows and columns.

Example:

```
<table border="1">
  <tr>
    <th>Name</th> <th>Age</th> <th>City</th>
  </tr>
  <tr>
    <td>Alice</td> <td>22</td> <td>London</td>
  </tr>
</table>
```

★ <table> <tr> = row | <th> = header | <td> = data

3 SEMANTIC HTML

Semantic elements clearly describe their meaning to both browser and developer.

Common Semantic Tags:

<header> → Intro or top section
 <nav> → Navigation links
 <main> → Main content area
 <section> → Section of content
 <article> → Independent content
 <footer> → Footer of the page

💡 Semantic HTML improves readability and SEO.

4 FINAL RECAP

- ✓ HTML is the backbone of web pages.
- ✓ It provides structure, not styling.
- ✓ Tags and elements build the content.
- ✓ Browser reads HTML and displays the page.
- ✓ Practice + Build projects = Mastery!

Keep Learning, Keep Building!

The more you practice HTML, the better you get. Happy Coding!
