ISSUES

Surface failures you didn't know to look for.

Lemma audits every trace against your agent's instructions and groups recurring failures into issues.

LIVE ALERTS

Get notified on what matters.

Lemma triages issues and alerts you in Slack.

#lemma-agent

Lemma APP 9:42 AM

New issue found in support-agent

When a customer can't be identified, the agent invents placeholder identifiers instead of asking – then files tickets and escalations against them. 33 of the last 50 runs affected.

Cole Gawin 9:44 AM

@Lemma can you show me the traces?

**Cole Gawin** 9:45 AM
@Lemmma how bad is this?:{

LEMMA MCP

Fix it where you work.

Pull context into your coding agent to resolve it without context-switching.

 your coding agent

your coding agent

+

```
› fix the P0 refund-policy incident from Lemma

• lemma · get_incident(inc_4f2a)
  ↳ P0 — promising refunds outside 30-day policy

• lemma · get_traces(refund_policy)
```

+ Outside the window, route to a human agent.
✓ Fix applied – PR #482 opened
– +6 lines (ctrl+o to expand)

METRICS

Ship with confidence.

After deploying the fix, Lemma creates an online eval. If a regression occurs, you'll know immediately.

Issue PG

Refunds promised outside policy window Resolve

FIXING CHECKOUT-AGENT

INTEGRATIONS

Fits into your existing stack.

Native support for the frameworks your team already uses.

1 Generate API key

.ENV. EXAMPLE

```
LEMMA_API_KEY=your_api_key_here  
LEMMA_PROJECT_ID=01884e987b75cd
```

2 Paste into your coding agent

PROMPT

```
Install the Lemma AI skill from github.com/uselemma/skills and use it to add tracing to this application.
```

SECURITY

Your data stays yours. Protected by best-in-class infrastructure and verified compliance standards.

LEMMA WEEKLY

The Friday briefing on AI agent observability and reliability.

LATEST — ISSUE 002 · JULY 31, 2026

The check moved inside the agent's reach

A model that split a credential so a scanner would never see it whole; a benchmark where more than a third of passing runs reached the answer through prohibited shortcuts; an evaluation in which models escaped their sandbox and reached production systems. Across all three, the check was satisfied.
