

Рассчитайте обязательный минимальный размер распределения на 2026 год

Узнайте точно, сколько вам необходимо вывести из вашего IRA или 401 (k) в этом году. Бесплатно, обновлено для таблиц ожидаемой продолжительности жизни IRS за 2026 год и занимает менее минуты.

Рассчитайте Мой RMD

Введение в RMDs

Что такое RMD?

Обязательное минимальное распределение (Required Minimum Distribution, RMD) — это минимальная сумма, которую владельцы традиционных индивидуальных пенсионных счетов, индивидуальных пенсионных счетов с отсрочкой налогообложения, индивидуальных пенсионных счетов с упрощенным налогообложением и других пенсионных планов должны ежегодно снимать по достижении определенного возраста. Эти средства облагаются налогом как обычный доход.

Зачем нужны RMD?

RMD введены Налоговым управлением США, чтобы гарантировать, что пенсионные накопления, которые росли без уплаты налогов, в конечном итоге будут потрачены и обложены налогом в течение жизни владельца счета.

Кому нужно делать обязательные минимальные выплаты?

Если у вас есть традиционный индивидуальный пенсионный счет, 401(k), 403(b) или аналогичный пенсионный счет, вы должны начать делать обязательные минимальные выплаты до 1 апреля года, следующего за годом, когда вам исполнится 73 года (или 75 лет, если вы родились в 1960 году или позже). Ключевое преимущество: понимание обязательных минимальных выплат поможет вам спланировать свой пенсионный доход и избежать дорогостоящих штрафов.

Как пользоваться калькулятором обязательных минимальных выплат

Пошаговое руководство:

- **Введите свой возраст:** Укажите свой текущий возраст, чтобы определить коэффициент ожидаемой продолжительности жизни.
- **Введите остаток на счете:** Укажите остаток на вашем пенсионном счете по состоянию на 31 декабря предыдущего года.
- **Выберите тип счета:** Укажите, какой у вас счет: индивидуальный пенсионный счет, 401(k) или другой тип плана.
- **Рассчитать:** Нажмите на кнопку, чтобы узнать сумму обязательного минимального распределения на основе Единой таблицы пожизненных выплат Налогового управления США.

Что означают полученные Результаты:

Калькулятор показывает минимальную сумму, которую вы должны снять в течение года, чтобы соблюсти требования Налогового управления США. Вы можете снять больше, но если сумма будет меньше указанной, вам могут начислить штрафы.

Ключевой совет: дважды проверьте введенные данные, чтобы получить точные результаты, соответствующие вашей ситуации.

Примеры и сценарии

Пример 1: базовый расчет RMD

У 75-летней Сары есть традиционный индивидуальный пенсионный счет с балансом в 400 000 долларов. С помощью калькулятора обязательных минимальных выплат она узнает, что сумма составляет 15 625 долларов. Она должна снять как минимум эту сумму до 31 декабря.

счет на сумму 150 000 долларов. Калькулятор показывает, что общая сумма RMD составляет 14 815 долларов (9259 долларов из 401(k) и 5556 долларов из индивидуального пенсионного счета).

Пример 3: унаследованный индивидуальный пенсионный счет

68-летняя Лиза унаследовала индивидуальный пенсионный счет от своего покойного супруга. Как бенефициар, она может отложить обязательные минимальные выплаты до 72 лет. Калькулятор поможет ей спланировать свои действия.

Ключевой вывод: Калькулятор RMD упрощает сложные сценарии, обеспечивая соблюдение требований Налогового управления США.

Таблицы RMD на 2025 год

Налоговая служба США предоставляет таблицы ожидаемой продолжительности жизни для расчета обязательных минимальных выплат. Какую таблицу использовать, зависит от вашей ситуации: являетесь ли вы первоначальным владельцем счета, у вас более молодой супруг или супруга или вы унаследовали счет.

Единая таблица ожидаемой продолжительности жизни (наиболее распространенная)

Используйте эту таблицу, если вы являетесь владельцем счета и ваш супруг или супруга НЕ являются вашим единственным бенефициаром, ИЛИ если ваш супруг или супруга являются вашим единственным бенефициаром, но они НЕ более чем на 10 лет моложе вас. Этой таблицей пользуется большинство людей.

Возраст	Фактор ожидаемой продолжительности жизни	Возраст	Фактор ожидаемой продолжительности жизни
72	27.4	97	7.8
73	26.5	98	7.3
74	25.5	99	6.8
75	24.6	100	6.4
76	23.7	101	6.0
77	22.9	102	5.6
78	22.0	103	5.2
79	21.1	104	4.9
80	20.2	105	4.6
81	19.4	106	4.3
82	18.5	107	4.1

83	17.7	108	3.9
84	16.8	109	3.7
85	16.0	110	3.5
86	15.2	111	3.4
87	14.4	112	3.3
88	13.7	113	3.1
89	12.9	114	3.0
90	12.2	115	2.9
91	11.5	116	2.8
92	10.8	117	2.7
93	10.1	118	2.5
94	9.5	119	2.3
95	8.9	120+	2.0
96	8.4		

Joint Life and Last Survivor Table

Use this table ONLY if your spouse is both your sole beneficiary AND more than 10 years younger than you. This table results in smaller RMDs because it accounts for the longer joint life expectancy.

Your Age	Spouse Age 55	Spouse Age 58	Spouse Age 60	Spouse Age 62
73	31.1	29.5	28.4	27.4
75	30.0	28.3	27.1	26.0
77	29.0	27.1	25.9	24.7
80	27.6	25.6	24.2	22.9
83	26.4	24.2	22.7	21.3
85	25.6	23.3	21.7	20.2

For the complete Joint Life and Last Survivor Table, see IRS Publication 590-B, Table II.

Single Life Expectancy Table (Inherited IRAs)

Use this table if you inherited an IRA and are required to take annual distributions based on your life expectancy. This applies to certain eligible designated beneficiaries.

5	79.7	45	40.8	85	8.9
10	74.8	50	36.2	90	6.2
15	69.9	55	31.6	95	4.2
20	65.0	60	27.2	100	2.8
25	60.2	65	23.0	105	1.8
30	55.3	70	19.0	110	1.1
35	50.5	75	15.4	115+	0.6

2025 RMD Age Requirements

The SECURE Act (2019) and SECURE 2.0 Act (2022) changed when you must start taking Required Minimum Distributions. Your RMD starting age depends on when you were born.

RMD Starting Age by Birth Year

If You Were Born	RMD Starting Age	First RMD Due By
Before July 1, 1949	70½	Already required
July 1, 1949 – December 31, 1950	72	Already required
January 1, 1951 – December 31, 1959	73	April 1 of year after turning 73
January 1, 1960 or later	75	April 1 of year after turning 75

Key SECURE 2.0 Act Changes

- **RMD Age Increase:** The required beginning age increased from 72 to 73 in 2023, and will increase to 75 starting in 2035.
- **Reduced Penalty:** The penalty for missing an RMD dropped from 50% to 25% of the missed amount. If you correct the mistake within two years, the penalty is further reduced to 10%.
- **Roth 401(k) Exemption:** Starting in 2024, Roth accounts in employer plans (401(k), 403(b)) no longer require RMDs during the owner's lifetime.
- **Surviving Spouse Election:** A surviving spouse who inherits an IRA can elect to be treated as the deceased spouse for RMD purposes.

Important: Even though your first RMD can be delayed until April 1 of the following year, delaying means you'll need to take TWO distributions in that year (your first RMD plus your second RMD by December 31). This could push you into a higher tax bracket.

RMD Calculation Examples

Understanding how to calculate your RMD helps you plan for taxes and avoid penalties. Here are detailed examples covering common scenarios.

Basic RMD Calculation Formula

$$\text{RMD} = \text{Account Balance (Dec. 31 of prior year)} \div \text{Life Expectancy Factor}$$

Example 1: Standard RMD Calculation

Scenario: Margaret is 75 years old. Her traditional IRA balance was \$500,000 on December 31, 2024.

Step 1: Find life expectancy factor for age 75 = 24.6

Step 2: $\$500,000 \div 24.6 = \$20,325.20$

Margaret's 2025 RMD = \$20,325.20

Margaret must withdraw at least \$20,325.20 by December 31, 2025. She can withdraw more, but not less without facing a penalty.

Example 2: First-Year RMD (Two Distributions in One Year)

Scenario: Robert turned 73 on September 15, 2024. His IRA balance was \$350,000 on December 31, 2023, and \$360,000 on December 31, 2024.

First RMD (for 2024, due by April 1, 2025):

$\$350,000 \div 26.5 \text{ (age 73 factor)} = \$13,207.55$

Second RMD (for 2025, due by December 31, 2025):

$\$360,000 \div 25.5 \text{ (age 74 factor)} = \$14,117.65$

Total distributions in 2025 = \$27,325.20

Tax Planning Tip: Robert could take his first RMD in December 2024 instead of waiting until April 2025 to spread the tax impact across two years.

balance was \$600,000 on December 31, 2024.

Step 1: Use Joint Life Table (spouse is sole beneficiary AND 13 years younger)
Step 2: Joint life expectancy factor for ages 78 & 65 = 24.0
Step 3: $\$600,000 \div 24.0 = \$25,000$

William's 2025 RMD = \$25,000

Compare: If William used the Uniform Lifetime Table, his factor would be 22.0, resulting in an RMD of \$27,272.73. The Joint Life Table saves him \$2,272.73 in required distributions.

Example 4: Multiple Retirement Accounts

Scenario: Patricia, age 76, has three retirement accounts:

- 401(k) from former employer: \$300,000
- Traditional IRA #1: \$200,000
- Traditional IRA #2: \$150,000

IRA RMD Calculation (can be aggregated):

Combined IRA balance: $\$200,000 + \$150,000 = \$350,000$

$\$350,000 \div 23.7$ (age 76 factor) = \$14,767.93

401(k) RMD Calculation (separate):

$\$300,000 \div 23.7 = \$12,658.23$

Total RMDs for 2025 = \$27,426.16

Important: Patricia can take her total IRA RMD (\$14,767.93) from either IRA or split it between them. However, the 401(k) RMD must come from the 401(k) account specifically.

Example 5: Calculating the Penalty for a Missed RMD

Scenario: David's RMD for 2024 was \$18,000, but he only withdrew \$10,000.

Shortfall: $\$18,000 - \$10,000 = \$8,000$

Standard penalty (25%): $\$8,000 \times 0.25 = \$2,000$

Reduced penalty if corrected within 2 years (10%): $\$8,000 \times 0.10 = \800

David owes \$2,000 penalty (or \$800 if corrected promptly)

David should withdraw the additional \$8,000 as soon as possible and file Form 5329 with his tax return. He may request a penalty waiver by attaching a statement explaining the reasonable cause for the shortfall.

original owner, when they passed away, and whether they had already started taking RMDs.

The 10-Year Rule

For most non-spouse beneficiaries who inherited an IRA after December 31, 2019, the entire account must be emptied by the end of the 10th year following the year of death. This is known as the “10-Year Rule.”

Important 2024 Update: The IRS clarified that if the original owner had already reached their RMD age before death, beneficiaries subject to the 10-year rule must ALSO take annual RMDs during years 1-9. You cannot simply wait until year 10 to withdraw everything.

Beneficiary Categories and Rules

Beneficiary Type	Distribution Rule	Annual RMDs Required?
Surviving Spouse	Can treat as own IRA, remain as beneficiary, or use 10-year rule	Depends on election
Minor Child of Deceased	Life expectancy until age 21, then 10-year rule	Yes
Disabled Individual	Life expectancy method (stretch IRA)	Yes
Chronically Ill Individual	Life expectancy method (stretch IRA)	Yes
Individual ≤10 Years Younger	Life expectancy method (stretch IRA)	Yes
All Other Individuals	10-year rule	Yes, if owner was past RMD age
Non-Individual (Estate, Charity)	5-year rule or life expectancy (depends on timing)	Varies

Spousal Beneficiary Options

Surviving spouses have the most flexibility when inheriting an IRA. Here are the three main options:

Option 1: Treat as Your Own IRA

- Roll the inherited IRA into your own IRA or elect to treat it as your own
- RMDs based on your own age using the Uniform Lifetime Table
- Can delay RMDs until you reach age 73 (or 75 if born 1960+)
- **Best for:** Younger spouses who don't need the money immediately

Option 2: Remain as Beneficiary

- Keep the account titled as an inherited IRA
- RMDs based on your life expectancy using Single Life Table
- Can access funds without the 10% early withdrawal penalty (even if under 59½)
- **Best for:** Spouses under 59½ who need access to funds

Option 3: Elect the 10-Year Rule

- Empty the account by the end of the 10th year after death
- No annual RMD requirements (more flexibility on timing)

Example: Adult Child Inherits IRA (Owner Past RMD Age)

Scenario: Michael (age 50) inherited his father's \$400,000 IRA in 2024. His father was 80 when he passed.

Requirements:

- Each subsequent year, reduce the life expectancy factor by 1
- Michael must take annual RMDs in years 2024–2032 (years 1–9)
- All remaining funds must be withdrawn by December 31, 2034 (year 10)
- Year 1 RMD: $\$400,000 \div 36.2$ (age 50 factor from Single Life Table) = \$11,049.72

Example: Adult Child Inherits IRA (Owner Before RMD Age)

Scenario: Jennifer (age 45) inherited her mother's \$300,000 IRA in 2024. Her mother was 68 when she passed (before reaching RMD age).

Requirements:

- No annual RMDs required during years 1–9
- All funds must be withdrawn by December 31, 2034
- Jennifer can strategically time withdrawals to manage tax brackets

Tax Strategy: Jennifer could withdraw \$30,000/year to stay in a lower tax bracket rather than taking \$300,000 in year 10.

Planning Tip: Even when annual RMDs aren't required, consider taking distributions each year to avoid a large taxable event in year 10. Spreading distributions over 10 years often results in lower total taxes than taking everything at once.

Inherited IRA RMD Calculation

For beneficiaries using the life expectancy method:

Year 1 RMD = Account Balance (Dec. 31 of year of death) $\div$ Your Life Expectancy Factor

Year 2+ RMD = Account Balance (Dec. 31 of prior year) $\div$ (Original Factor - Years Elapsed)

Example: Calculating Inherited IRA RMDs Over Time

Scenario: Sarah (age 55) inherited a \$200,000 IRA in 2023. She must use the life expectancy method.

2024 RMD (Year 1):

Life expectancy factor at age 55 = 31.6

$\$200,000 \div 31.6 = \$6,329.11$

2025 RMD (Year 2):

Assuming balance is now \$195,000

2026 RMD (Year 3):

Assuming balance is now \$190,000

Factor = $31.6 - 2 = 29.6$

$\$190,000 \div 29.6 = \$6,418.92$

Common RMD Questions

When do I need to start taking RMDs?

How is the RMD amount calculated?

Can I withdraw more than the RMD amount?

What happens if I don't take my RMD?

Are there exceptions to RMD rules?

How do RMDs affect my taxes?

Can I reinvest my RMD?
