# Update the kernel version

Updated at: 2026-08-21 11:41:24  Copy as MD Product

ApsaraDB for SelectDB allows you to update the kernel version to enhance performance, add new features, or fix known issues. Using an outdated kernel version can lead to service interruptions and data loss. This topic describes how to update the kernel version of an instance in the ApsaraDB for SelectDB.

## Usage notes

- When a new kernel version is released, ApsaraDB for SelectDB sends a notification to the contacts configured for your Alibaba Cloud account. Update the kernel version promptly.  
If you do not update to the latest kernel version within six months of receiving the notification, you are responsible for any resulting service interruptions, data loss, or other consequences.
- After you update the kernel version, you cannot roll it back to a previous version.
- During a kernel version update, you can only view cluster information. You cannot perform operations such as scaling, pausing, or deleting a cluster.

## Impacts

- A **minor version update** causes transient connections on the instance, and some read and write requests may fail briefly.
- A **major version upgrade** causes a cluster restart and the instance may be unavailable for about 10 minutes. We recommend that you perform this upgrade during off-peak hours.
- Rolling update:** Nodes within a cluster are updated sequentially. The cluster remains available, but transient connections may occur.
- Parallel update:** All nodes within a cluster are updated simultaneously. This causes

the cluster to be unavailable for 1 to 5 minutes. We recommend that you perform this operation during off-peak hours.

### Procedure

1. Log on to the [SelectDB console](#).
2. In the upper-left corner of the page, select the region where your instance is located.
3. On the **Instances** page, click the **Instance ID** of the target instance to open the **Instance Details** page.
4. In the **Configuration Information** section, next to **Version Upgrade**, click **Minor Engine Version**.
5. In the dialog box that appears, configure the following parameters.

| Parameter      | Description                                                                                                                                                                                                                                                                                                                                                                                                                          |
|----------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| target version | Select the version to which you want to update the instance.                                                                                                                                                                                                                                                                                                                                                                         |
| update method  | <p>ApsaraDB for SelectDB instances support the following update methods:</p> <ul style="list-style-type: none"><li>◦ <b>Upgrade Now:</b> The instance is updated immediately.</li><li>◦ <b>Update Within Maintenance Window:</b> The instance is updated within the maintenance window that you have configured. For more information about how to set a maintenance window, see <a href="#">Set a maintenance window</a>.</li></ul> |
