SelectDB AI Assistant

Updated at: 2026-07-31 06:43:08

SelectDB AI Assistant is an LLM-powered intelligent O&M tool that provides intelligent Q&A and slow query analysis. Use natural language to resolve product questions, identify performance bottlenecks, and get optimization recommendations.

and
SELECT.

- **Best practice retrieval:**
Get implementation guidance for table design, partitioning and bucketing, index selection, data ingestion, and query optimization.

- **Troubleshooting assistance:**
Diagnose common problems such as connection timeouts, ingestion failures, slow queries, and out-of-memory errors and receive recommended remediation steps.

Chat now with **Alibaba Cloud Customer Service** to assist you in finding the right products and services to meet your needs.

- **Operation walkthroughs:**
Learn how to create instances, configure IP allowlists, connect to a database, enable internet access, and configure monitoring and alerts.

Slow query analysis

The assistant aggregates the slow query audit log of a specified instance to surface long-running queries and recommend optimizations. Each answer cites the tool used (for example, describe -slow-query-stats).

operator-by-operator breakdown of execution time, scanned rows, and memory consumption. This helps determine whether the bottleneck is in Scan, Join, Aggregation, or data transfer.

Profile collection is disabled by default. Enable it before executing the query you want to analyze:

1. Connect to the SelectDB instance with a MySQL client and run the following command to check whether profile collection is enabled in the current session:

Chat now with **Alibaba Cloud Customer Service** to assist you in finding the right products and services to meet your needs.

SH

true
indicates
that
profile
collection
is
enabled.
false
indicates
that it is
not.

2. If profile
collection
is not
enabled,
run the
following
command
in the
same
session
to
enable
it:

Best
practices

Chat now with **Alibaba Cloud Customer Service** to assist you in finding the right products and services to meet your needs.

- Include context in your question : instance ID (selected with @), time of issue, and error messages or symptoms.
- For complex O&M issues, iterate through *symptom -> hypothesis -> investigation step* across multiple turns to converge on the root cause.
- Test any configuration change or SQL snippet on a non-production instance before applying to

Chat now with **Alibaba Cloud Customer Service** to assist you in finding the right products and services to meet your needs.

production.

- Use **Thumbs up** or **Thumbs down** to rate answers. Your feedback directly influences model improvements.

Disclaimer

r

- The responses produced by SelectDB AI Assistant are generated by AI. They are provided for reference only, are not guaranteed to be fully accurate, and do not represent the position or commitment of

Alibaba
Cloud.

- You are responsible for the decisions you make and the operations you perform based on the assistant's output.
- To deliver intelligent O&M capabilities, the service collects basic information, audit logs, monitoring metrics, and key events of the selected instance. This data is used only for the current conversation and is not reused for other purposes.

Chat now with **Alibaba Cloud Customer Service** to assist you in finding the right products and services to meet your needs.

FAQ

Does SelectDB AI Assistant change my instance configuration automatically?

No. The assistant only provides analysis, configuration examples, and operation walkthroughs. Every operation that involves instance configuration, parameter changes, or data changes must be performed manually by you in the console or with a client.

Why does slow query analysis return 0?

Common causes: no queries ran during the selected range, no query exceeded

Chat now with **Alibaba Cloud Customer Service** to assist you in finding the right products and services to meet your needs.

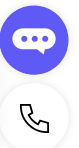

the 5,000 ms default threshold, or the SQL audit log is disabled. Confirm the instance is receiving traffic and the audit log is enabled, then lower the threshold (for example, to 1,000 ms) if needed.

Does the assistant support cross-region instance analysis?

Yes. The instance picker triggered by @ lists every SelectDB instance under the current account across all regions. You can analyze an instance from another region without leaving the current AI Assistant page.

Chat now with **Alibaba Cloud Customer Service** to assist you in finding the right products and services to meet your needs.

How can I improve the accuracy of the answers?

Include the instance ID, time range, symptom, and troubleshoot ing steps you have already tried. Select the target instance with @ to give the assistant instance context for more targeted responses.
