Introducing GLM-5.3: Built to Code. Ready for Cyber Defense.

- Top-tier coding and agentic capabilities, achieved through post-training on the 743B base model
- A major leap in cybersecurity, setting a new standard among open models

GLM-5.3 takes agentic coding to the next level, delivering a dramatic improvement over GLM-5.2 while achieving better results with fewer output tokens.

### Agentic Coding Performance by Effort Level

Z.ai Code Bench v1.0, evaluated on Claude Code 2.1.207

An initial group of partners is now offering GLM-5.3-powered services through our official service, with its safeguards and usage policies in place. We're expanding partner access through a consistent and responsible process and will share updates publicly.

Congrats guys! Does this make GLM-5.3 the strongest open model to date so far? 🤖 We can't wait to make quants for it for the people who can run it.

Would also be incredible if you guys could create smaller models like before like GLM-4.7-Flash! 🙏
