

The Work AI Index 2026

Botsitting, botshitting, and the hidden human labor of AI at work

AI is everywhere at work. 87% of digital workers use it and say it saves them 11 hours every week. But only 13% say their organization is performing significantly better because of it.

So where is that time going?

Into the work no one planned for: feeding AI context, checking outputs, fixing mistakes, and cleaning up the confident-but-wrong answers AI leaves behind. This report from the Work AI Institute reveals the hidden work of making AI usable.

You'll learn:

- **Where AI's time savings go.**
Workers spend 6.4 hours a week botsitting – more time than they spend using AI to produce work.
- **How botsitting turns into botshitting.**
69% of AI users admit to shipping work they haven't verified, don't fully understand, or can't confidently stand behind.
- **What high AI achievers do differently.**
See how high AI achievers protect their judgment, learn from the tool, and know when not to use it.
- **How organizations can close the operating gap.**
Learn how better context, meaningful metrics, practical governance, and redesigned workflows help break the botsitting-botshitting cycle.

Discover the hidden work of making AI usable.
