Load Balancing Software *(continued)*

Load Balancing Definition

Load balancing software manages incoming network traffic and distributes workloads across multiple servers using algorithms such as round-robin, least connections, or IP hash. This ensures optimal resource utilization, prevents bottlenecks, and delivers high availability, even under heavy or fluctuating traffic conditions.

High-traffic websites and applications use load balancers to allocate requests efficiently, prevent server overload, and ensure fast response times. With features like server health monitoring, load balancers redirect traffic from underperforming servers to maintain uninterrupted service.

Industries like e-commerce, finance, and healthcare rely on load balancers to manage unpredictable traffic, minimize downtime, and ensure seamless operations during failovers or surges. Without them, organizations risk resource wastage, server failures, and degraded user experiences, jeopardizing operational continuity.

Load balancer software includes features like auto-scaling, health monitoring, secure sockets layer (SSL) offloading, session persistence, and DDoS protection. Auto-scaling adjusts resources for fluctuating traffic, while health monitoring ensures traffic is rerouted to functioning servers. SSL offloading handles encryption efficiently, reducing server load. Session persistence maintains user connections to the same server, essential for applications like banking, and DDoS protection safeguards against attacks that could overwhelm the system.

Load testing tools complement load balancing by simulating traffic surges and evaluating system performance under stress. These tools help organizations identify bottlenecks, test failover strategies, and fine-tune configurations, optimizing the effectiveness of the best load balancing software.

To qualify for inclusion in the Load Balancing category, a product must:

- Monitor incoming network traffic and distribute it across multiple servers using algorithms like round-robin, least connections, random distribution, or IP hash
- Scale workloads dynamically to accommodate fluctuating traffic demands, ensuring efficient use of resources and consistent performance
- Continuously monitor server status to detect failures or underperformance and reroute traffic to available servers to maintain uninterrupted service
- Provide failover mechanisms to sustain operations by redirecting traffic during server outages or unexpected failures
- Support secure data transmission with secure sockets layer(SSL)/transport layer security (TLS) termination or seamless integration with external security tools to ensure robust encryption and decryption processes
- Manage backend server pools with the ability to dynamically add or remove servers as needed
- Perform basic server health checks to ensure traffic is only routed to operational servers

Load Balancing Software *(continued)*

Load Balancing Grid® Scoring Description

Products shown on the Grid® for Load Balancing have received a minimum of 10 reviews/ratings in data gathered by July 28, 2026. Products are ranked by customer satisfaction (based on user reviews) and market presence (based on market share, seller size, and social impact) and placed into four categories on the Grid®:

Products in the Leader quadrant are rated highly by G2 users and have substantial Market Presence scores. Leaders include: HAProxy, AWS Elastic Load Balancing, Akamai Cloud Computing, Cloudflare Application Security and Performance, Progress Kemp LoadMaster, Azure Traffic Manager, and F5 NGINX Ingress Controller

High Performing products have high customer Satisfaction scores and low Market Presence compared to the rest of the category. High Performers include: Azion, FortiADC and FortiGSLB, Load Balancer Enterprise ADC, Hostwinds, TR7 ASP, and Traefik

Contender products have relatively low customer Satisfaction scores and high Market Presence compared to the rest of the category. While they may have positive reviews, they do not have enough reviews to validate those ratings. Contenders include: Google Cloud Load Balancing, Azure Application Gateway, Azure Load Balancer, F5 NGINX Plus, FortiAppSec Cloud, Oracle Cloud Infrastructure Load Balancing, and F5 BIG-IP Local Traffic Manager (LTM)

Niche products have relatively low Satisfaction scores and low Market Presence compared to the rest of the category. While they may have positive reviews, they do not have enough reviews to validate those ratings. Niche products include: F5 NGINX, Fastly Content Delivery, GCore Load Balancer, Portkey, Radware Alteon Application Delivery and Security, NetScaler, Varnish Software, and Apache Traffic Server

Grid® Scores for Load Balancing Software

The table below shows the Satisfaction and Market Presence scores that determine product placement on the Grid®. To learn more about each of the products, please see the profile section.

Leaders

	# of Reviews	Satisfaction	Market Presence	G2 Score
HAProxy	841	100	66	83
AWS Elastic Load Balancing	91	61	90	75
Akamai Cloud Computing	155	60	86	73
Cloudflare Application Security and Performance	163	59	86	72
Progress Kemp LoadMaster	202	65	63	64
Azure Traffic Manager	15	50	76	63
F5 NGINX Ingress Controller	16	72	50	61

High Performers

Azion	10	78	23	50
FortiADC and FortiGSLB	10	51	44	48
Load Balancer Enterprise ADC	38	75	19	47
Hostwinds	73	79	12	46
TR7 ASP	20	77	9	43
Traefik	27	53	12	32

(Grid® Scores for Load Balancing Software continues on next page)

*** Products are ordered by G2 Score. Satisfaction score is used as a tiebreaker if two products have the same G2 Score.**

Grid® Methodology

Grid® Rating Methodology

The Grid® represents the democratic voice of real software users, rather than the subjective opinion of one analyst. G2 rates products from the Load Balancing category algorithmically based on data sourced from product reviews shared by G2 users and data sourced from third parties.

Technology buyers can use the Grid® to help them quickly select the best products for their businesses and to find peers with similar experiences. For sellers, media, investors, and analysts, the Grid® provides benchmarks for product comparison and market trend analysis.

Grid® Scoring Methodology

The Grid® Report for Load Balancing | Fall 2026 is based on reviews collected through July 28, 2026. We apply unique algorithms to this data to calculate Satisfaction (v4.0) and Market Presence (v7.0) scores for the Fall 2026 report quarter. To view the Load Balancing Grid® with the most recent data, please visit the Load Balancing page. For more details on Grid® Scoring, please view the G2 Scoring Methodology here.

Grid® Categorization Methodology

Making G2 research relevant and easy for people to use as they evaluate and select business software products is one of our most important goals. In support of that goal, organizing products and software companies in a well-defined structure that makes capturing, evaluating, and displaying reviews and other research in an orderly manner is a critical part of the research process.

To manage the process of categorizing the software products and the related reviews in the G2 community, G2 follows a publicly available categorization methodology. All products appearing on the Grid® have passed through G2's categorization methodology and meet G2's category standards.

Many terms that appear regularly across G2 and are used to aid in product categorization warrant a definition to facilitate buyer understanding. These terms may be included within reviews from the G2 community or in executive summaries for products included on the Grid®. A list of standard definitions is available to G2 users to eliminate confusion and ease the buying process.

Rating Changes and Dynamics

The ratings in this report are based on a snapshot of the user reviews and third-party data collected by G2 up through July 28, 2026. The ratings may change as the products are further developed, the sellers grow, and as additional opinions are shared by users. G2 updates the ratings on its website in real time as additional data is received, and this report will be updated as significant data is received. By improving their products and support and/or by having more satisfied customer voices heard, Contenders may become Leaders and Niche sellers may become High Performers.

Trust

Keeping our ratings unbiased is our top priority. G2 follows defined community guidelines to ensure privacy, and authenticity for users and reviews. For more details, please view the G2 Community Guidelines here.

Grid® Methodology *(continued)*

Grid® Inclusion Criteria

All products in a G2 category that have at least 10 reviews from real users of the product are included on the Grid®. Inviting other users, such as colleagues and peers, to join G2 and share authentic product reviews will accelerate this process.

If a product is not yet listed on G2 and it fits the market definition above, then users are encouraged to suggest its addition to our Load Balancing category.

Product Profiles

Product profiles and detailed charts are included for products with 10 or more reviews.

HAProxy

4.7 ★★★★½ (912)

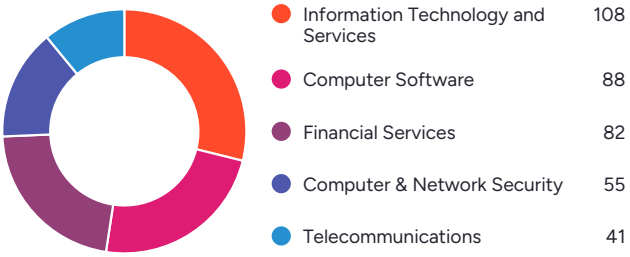

FALL 2026 Leader

HAProxy has been named a Leader based on receiving a high customer Satisfaction score and having a large Market Presence. HAProxy received the highest Satisfaction score among products in Load Balancing. 99% of users rated it 4 or 5 stars, 92% of users believe it is headed in the right direction, and users said they would be likely to recommend HAProxy at a rate of 94%. HAProxy is also in the Web Application Firewall (WAF), DDoS Protection, Container Networking, API Management, Bot Detection and Mitigation, and AI Gateways categories.

AWS Elastic Load Balancing

4.5 (96)

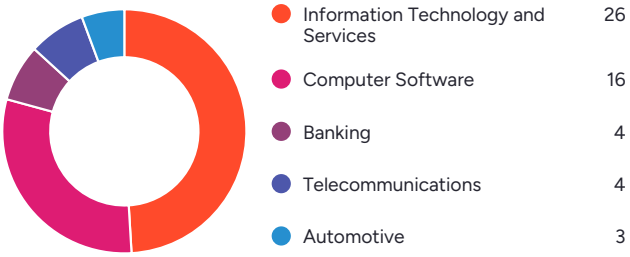

Leader

AWS Elastic Load Balancing has been named a Leader based on receiving a high customer Satisfaction score and having a large Market Presence. AWS Elastic Load Balancing has the largest Market Presence among products in Load Balancing. 96% of users rated it 4 or 5 stars, 99% of users believe it is headed in the right direction, and users said they would be likely to recommend AWS Elastic Load Balancing at a rate of 91%.

NetScaler

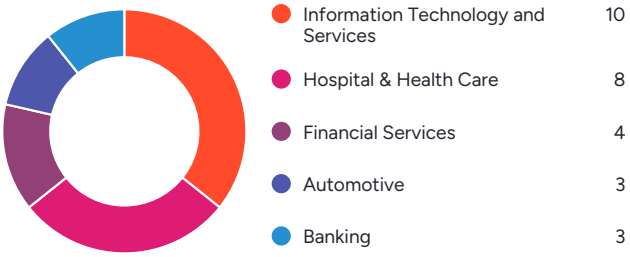

4.4 ★★★★½ (85)

NetScaler has been named a Niche product based on having a relatively low Satisfaction score and low Market Presence compared to the rest of the category. While they may have positive reviews, they do not have enough reviews to validate those ratings. 93% of users rated it 4 or 5 stars, 86% of users believe it is headed in the right direction, and users said they would be likely to recommend NetScaler at a rate of 89%. NetScaler is also in the Zero Trust Networking, Container Security, Web Application Firewall (WAF), and Container Networking categories.
