@vercel_dev

Hermes Agent can run using Vercel AI Gateway and Vercel Sandbox.

Use your AI Gateway key for inference to reach every model with full observability on spend, and Sandbox to run each command in an isolated microVM of its own.

Love seeing model access, spend visibility and sandboxing come together. Can you already follow the cost of one agent task from start to finish?

i've seen isolated microvms leak secrets through command output, so output redaction still matters
