Согласно анализу CNBC, на основе отчетов о расходах Палаты представителей на инструменты искусственного интеллекта за год, закончившийся 31 марта.

Покупки ChatGPT были совершены по меньшей мере в 71 офисе членов Палаты представителей — примерно в каждом шестом — при этом демократы потратили на идентифицируемые инструменты искусственного интеллекта более чем в три раза больше, чем республиканцы.

Приведенные цифры отражают лишь часть случаев использования ИИ в Конгрессе, но показывают, что эта технология становится неотъемлемой частью законодательных исследований, работы с избирателями и коммуникаций, пока законодатели обсуждают вопросы регулирования и надзора в отрасли.

Генеральный директор OpenAI Сэм Альтман беседует с журналистами после встреч на Капитолийском холме в Вашингтоне, 3 июня 2026 года.

Эвелин Хокштейн | Reuters

На долю разработчика [ChatGPT](#) приходилось примерно 9 долларов из каждых 10 долларов, потраченных на идентифицируемые инструменты искусственного интеллекта офисами Палаты представителей, комитетами и институциональными счетами в течение года, закончившегося 31 марта, согласно анализу CNBC [записей о выплатах Палаты представителей](#).

Записи дают лишь частичное представление о внедрении Искусственного интеллекта Конгрессом, поскольку они исключают бесплатные учетные записи, искусственный интеллект, связанный с более широкими контрактами на программное обеспечение, и большую часть использования Сенатом. Тем не менее, они показывают, что по меньшей мере шестая часть офисов—членов Палаты представителей - и, вероятно, многие другие — уже используют инструменты искусственного интеллекта, поскольку законодатели формируют будущее отрасли.

По последним имеющимся данным, в период с 1 апреля 2025 года по 31 марта 2026 года компания CNBC потратила на названных поставщиков ИИ не менее 113 740 долларов. На долю ChatGPT пришлось 100 580 долларов из этой суммы в 798 транзакциях — около 88% от общей суммы и 96% от общего числа рассмотренных транзакций. [Claude от Anthropic](#), ближайший конкурент ChatGPT среди чат-ботов, занял второе место с большим отрывом, заработав в общей сложности 13 160 долларов на 37 транзакциях.

Конкуренция касается не только продуктивности работы в Конгрессе. OpenAI, Anthropic, [Google](#) и [Microsoft](#) борются за [влияние в Вашингтоне](#), пока законодатели и федеральные агентства решают, как следует закупать, использовать и регулировать ИИ.

Сотрудники Конгресса используют эти инструменты для обобщения законодательства, составления меморандумов, подготовки материалов для слушаний и ответов избирателям. Эта работа может повлиять на то, как ведомства понимают политику, взаимодействуют с избирателями и

она проводила за день. Это время уходило на написание и продвижение законопроектов.

Федорчак рассказала, что она и ее сотрудники использовали ChatGPT для создания базы данных с возможностью поиска по законодательным актам, над которыми она работала, и материалам, полученным от избирателей и сторонних организаций. По ее словам, использование искусственного интеллекта для составления аналитических записок на основе этой информации «еженедельно экономит десятки и десятки часов рабочего времени сотрудников».

Other offices are also using AI to summarize [reports and bills](#), draft social media posts, prepare constituent responses, analyze legislation, review hearing materials and sort through policy research, according to Marci Harris, CEO of [POPVOX Foundation](#), a nonprofit that helps train members of Congress and staff on how to use AI.

“Staffers are famously overwhelmed, and actually AI is exacerbating that,” Harris said, noting that lobbyists and constituents are also using AI to send longer, more frequent and more detailed material to congressional offices. Lawmakers are working with less staff than in years past, Brennan Center for Justice senior research fellow [Maya Kornberg](#) notes in her book “Stuck — How Money, Media and Violence Prevent Change in Congress.”

[Democratic](#) member offices accounted for \$54,165 in identified AI purchases, more than three times the \$15,782 spent by [Republican](#) offices.

ChatGPT purchases appeared in 44 Democratic member offices and 27 Republican offices. Claude purchases appeared in five Democratic offices and one Republican office.

The numbers underscore an awkward political dynamic: [Democrats](#) are leading the visible spending on AI tools, even as many in the party have [warned about the](#)

CNBC's analysis is limited to purchases for which House disbursement records specifically name an AI vendor. It does not capture use of free versions of ChatGPT, Claude or other products, nor does it capture AI functions bundled into broader software contracts, including [Microsoft Copilot](#).

Some offices also have a financial administrator purchase subscriptions and then reimburse that person. In those cases, the records show the reimbursement but not the specific tools purchased.

The analysis also excludes the Senate, whose public spending reports do not identify software vendors in the same way, making [ChatGPT subscriptions](#) impossible to trace. The Senate does not allow [Claude](#) for official use, according to chamber rules.

Harris said the House's Microsoft Copilot deployment may represent more official AI spending than the ChatGPT purchases visible in public records.

Some lawmakers also have internal protocols on how AI can and can't be used.

For Rep. James Walkinshaw, D-Va., AI helps with everything from research to social media posts and newsletters. But all facts must be independently verified, and decisions need to be made by a person.

"Our caseworkers in our district office can use AI to help organize casework requests, maybe expedite them, move things along faster," he told CNBC. "But when they're making decisions related to a constituent's case — are we going to advocate for our constituent with the Social Security Administration or with IRS? — that has to be a human decision, not an AI decision."

OpenAI and Anthropic did not respond to CNBC's request for comment.

A head start

[OpenAI's apparent dominance](#) traces back to Congress' first formal experiments with generative AI.

In 2023, the House Digital Service, an innovation arm inside the [Chief Administrative Officer's](#) office, launched an AI working group and distributed the first 40 ChatGPT Plus licenses to a bipartisan group of staff.

But Samantha Carter, the CAO's chief communications officer, said the House's approach "is deliberately not limited to a single vendor."

House officials issued more restrictive guidance around AI use in September 2024, limiting which tools staff could use for official work and warning against entering sensitive information. But by then, ChatGPT had already become the first AI product many offices knew by name.

"OpenAI was the firm that they heard about," Harris said. "In the early days, ChatGPT was almost synonymous with AI — the way Kleenex is with tissues or Band-Aid is with bandages."

OpenAI engineers helping lead part of the program.

Some offices, Fedorchak's included, have gotten personal training on products from OpenAI and Microsoft.

At the same time, AI companies are [expanding their Washington lobbying operations](#) as lawmakers and agencies debate how the technology should be bought, used and regulated.

OpenAI spent \$1 million on federal lobbying in the first quarter of 2026, up 82.5% from the same period a year earlier, according to an analysis by [Issue One](#), a nonprofit government watchdog, of federal lobbying disclosures. Anthropic spent nearly \$1.6 million, more than tripling its spending from the first quarter of 2025.

Interest in OpenAI's rivals grew only after ChatGPT had already established a foothold in congressional offices, Harris said.

"After the whole [Department of Defense-Anthropic blowup](#), we had people calling us saying, 'I want to use Claude. Tell me about Claude,'" Harris said.

In January, Anthropic [refused to remove restrictions](#) on using Claude for [mass domestic surveillance](#) and fully autonomous weapons. The dispute escalated in early March, when the Pentagon designated the company a [supply-chain risk](#).

CNBC has not identified a comparable Anthropic-run partnership with a similar nonpartisan Hill training group.

Why AI model choice matters

[Eric Petry](#) of the Brennan Center said it is fair to question the government when it appears to favor one company's product over a competitor's.

"It may be the case that one product is better suited for the government applications, or maybe one product is better than the other," Petry said. "But if it's based on partisan preferences, or there's politics at play, then it becomes really concerning."

The same principle applies whether the government is awarding a [major contract](#) or individual offices are buying subscriptions, he said.

"We want to make sure that taxpayer dollars are being used to give the government the best tools available, and not to reward political favorites," Petry said.

Congressional offices and nonpartisan legislative agencies should be able to test multiple models, compare their strengths and weaknesses, and understand how they behave before lawmakers write rules for the industry, Harris said.

"It's going to be their job to regulate it, so they need to be able to get their hands on all of them and understand the way that they work," Harris said.
