Создание подсказок

Ре

О чем следует подумать при написании подсказок
Используйте подробные подсказки, чтобы лучше контролировать генерируемые изображения. Подумайте о том, что вы хотите увидеть: персонажей, обстановку и общее настроение. Чем больше деталей вы добавите, тем ближе будет изображение к тому, что вы себе представили.

Style

Вы создаете иллюстрацию, фотографию или акварельную картину? Вам нужны реалистичные персонажи, ретрофутуристическая эстетика или что-то совершенно абстрактное?

A full body portrait **photo** of a friendly and relaxed snow leopard. It has one paw raised as it is walking towards us. The snow on the ground is melting, and small purple and yellow flowers are showing with some grass. The warm light is catching the rock edge. In the sky there is a contrail. Behind them all, a sharp rock protrudes high into the sky. The snow

Тема

Кто или что изображено на вашей картинке? Человек, животное или что-то совсем другое? Как они выглядят? Во что они одеты? Как они расположены?

Обстановка

Действие

Что происходит? Что-то падает? Парит? Кто-то варит кофе, гладит кошку или произносит магическое заклинание?

Композиция

Как вы хотите выстроить кадр? Портрет или пейзаж? Это крупный план, общий план, съемка с низкого ракурса? Попробуйте разные варианты.

Редактирование с подсказками

После создания изображения вы можете редактировать его до тех пор, пока не будете довольны результатом. Подправьте отдельные детали, измените ракурс, увеличьте качество — или полностью измените эстетику. Выбор за вами.

Change the character

Try swapping your subject for someone, or something, else. Or add extra characters – all while keeping the same style, setting, and composition.

Change the snow leopard to a rare, all-black Himalayan wolf. Its thick fur should have subtle silver tips that catch the light, and its eyes should be a striking amber color. Add a light dusting of fresh snow on its back and head, as if it just weathered a brief flurry.

Adjust the composition

Create new images from different angles, using the same subject and setting. And generate new details that are only visible from the new perspective.

Alter the action

Change what your characters are doing, to suit different situations. Do you want them to stand still, strike a fresh pose, or jump in the air?

Swap the setting

Rethink the style

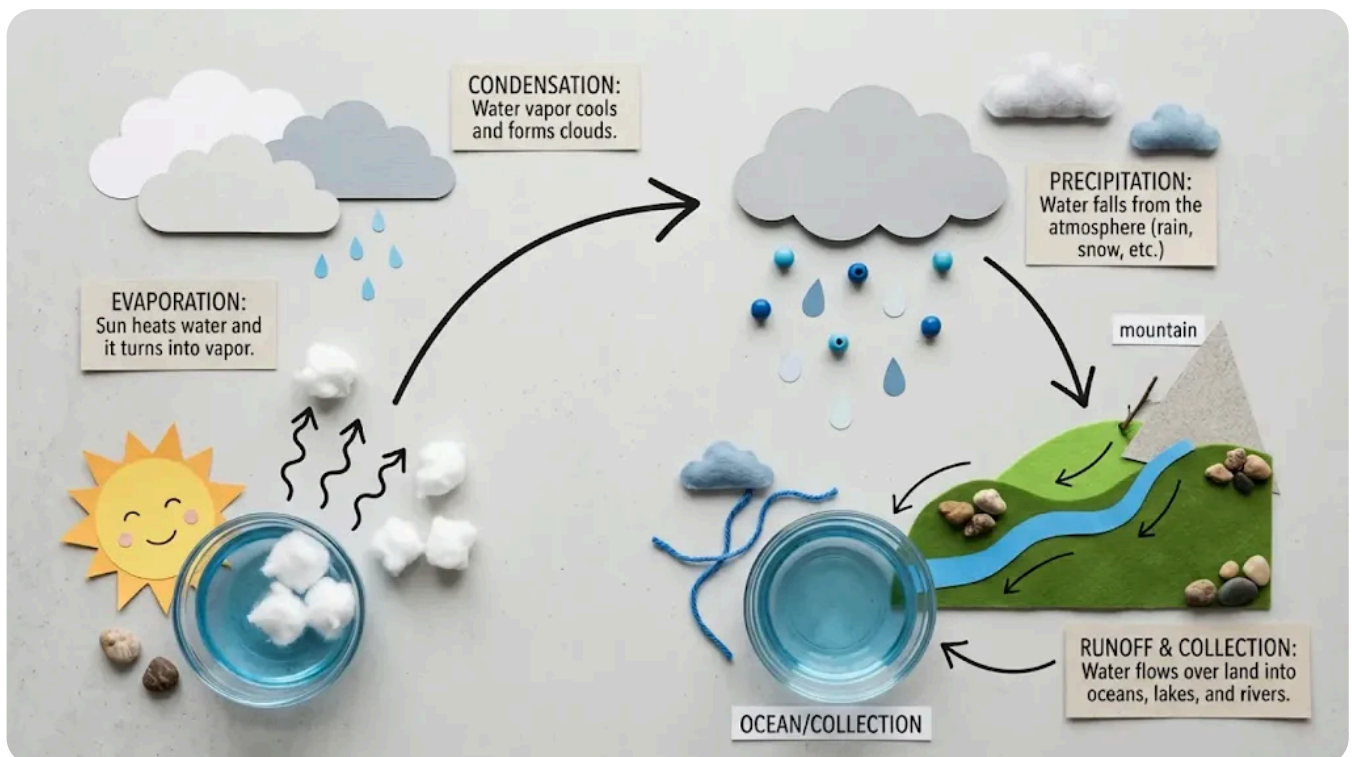

Freely reimagine the style of your composition. The model can reinterpret scenes, to switch between photographic style, illustrations, cartoons, and unique art styles.

General prompting

Even short prompts will generate high-quality images, but you can take better control of the output by adding details bit-by-bit. Keep playing, experimenting, and iterating, until you get the image you want to use.

Visualize real-world knowledge

Describe how you'd like the model to organize information by asking for a timeline or a flowchart. Prompt using real-world concepts, locations, or historical eras to draw from the model's deep knowledge base. Mention the visual theme you'd like the design to follow.

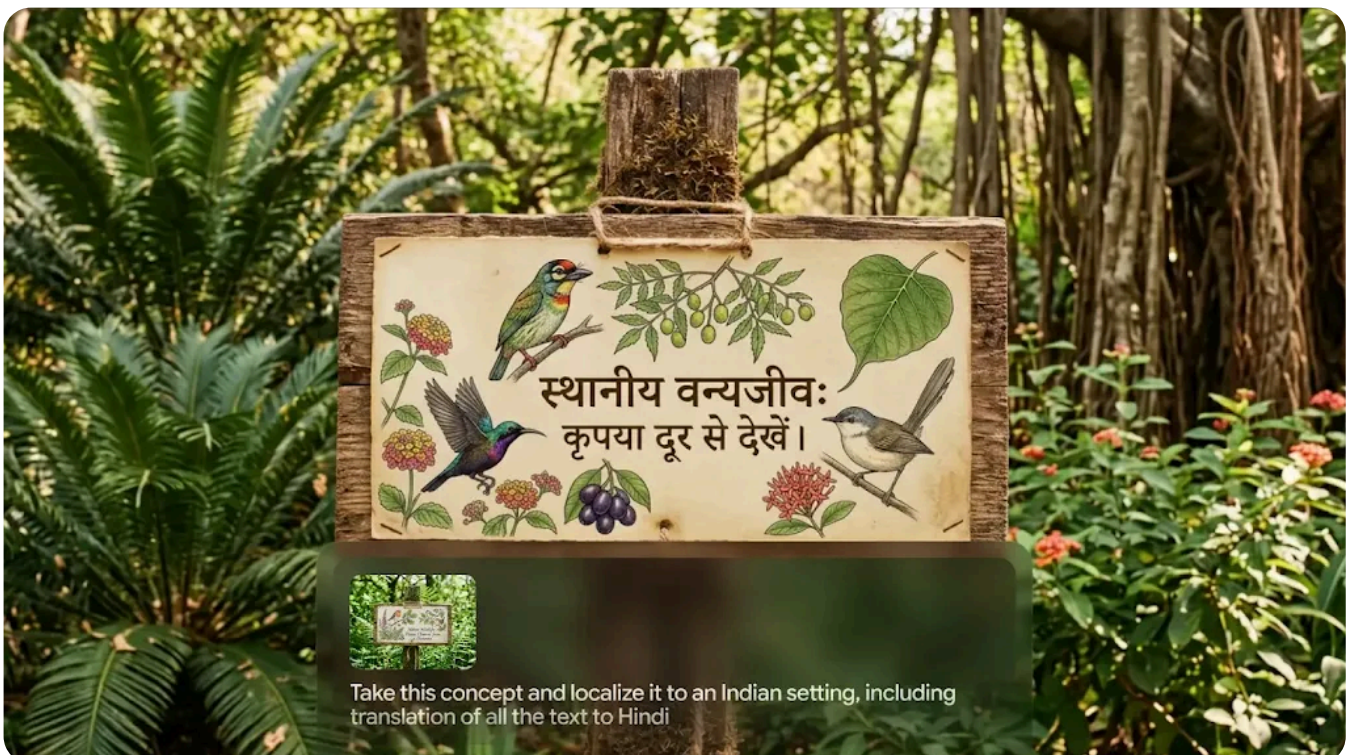

Render precise text

Translate and localize ideas

Write in one language, then specify the target language and regional cultural cues in your prompt. If you need specific foreign phrasing, provide the exact translated text in quote marks to guide the rendering.

Prompt for production-ready specs

Ask for multiple images at once

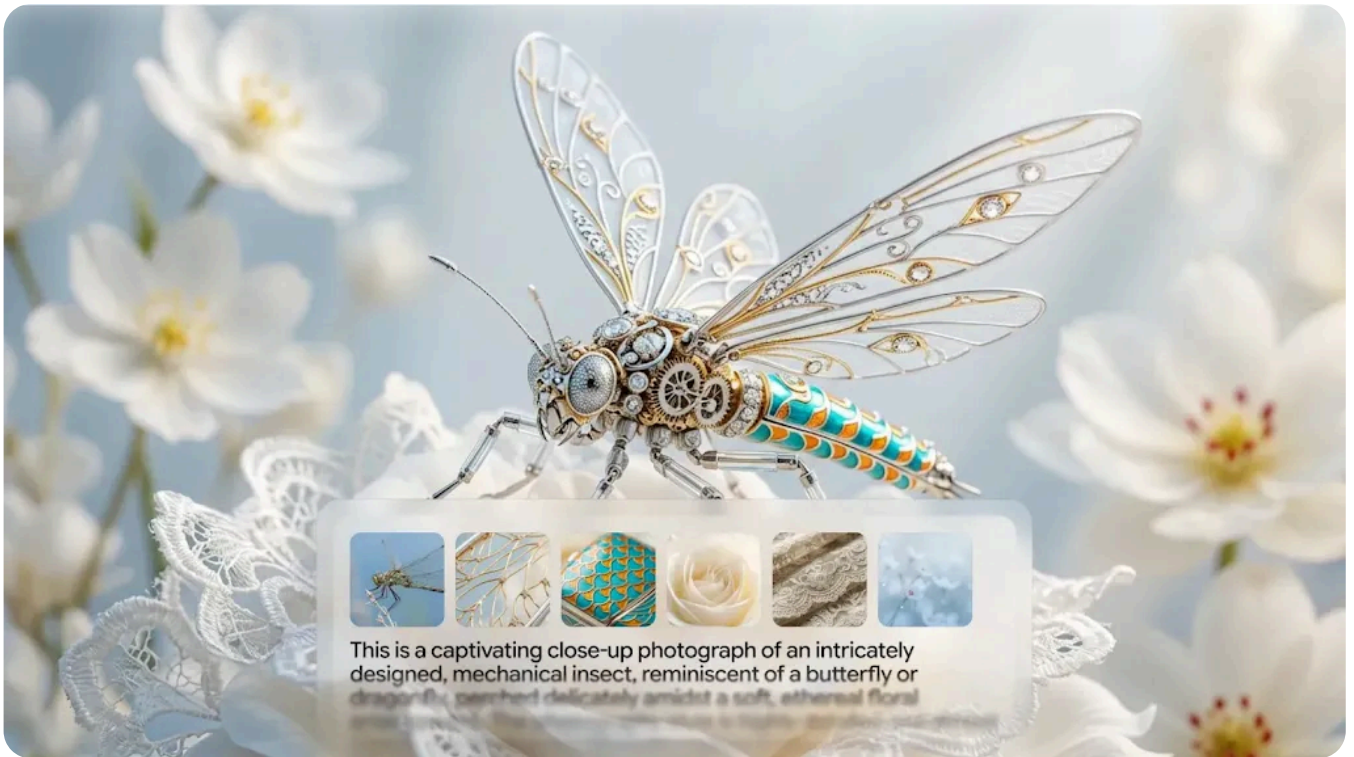

Ask for "three distinct variations of a product mock up" or "four different color palettes" to quickly compare ideas side-by-side. Or upload a single reference image and ask the model to generate a multi-image story based on it.

Create a funny 6 part story with these 3 fluffy friends building a tree house. The story is thrilling throughout with emotional highs and lows and is ending in a happy moment. Keep the attire and identity consistent of all 3 characters, but their expressions and angles should vary throughout all 6 images. Make sure to only have one of each character in each image. Generate 6 images one at a time. Each image should be a separate output in 16:9 format.

+  Create Image 

Maintain subject consistency

Nano Banana

Imagine almost anything – then create it. Generate detailed, playful, realistic, or whimsical images. Or anything in-between.
