

База знаний создана для некоммерческих организаций.

Ваши грантовые документы, отчеты спонсоров, протоколы заседаний совета директоров и отчеты о программах — все это можно найти за считанные секунды. Получайте цитируемые ответы из собственных документов и мгновенно узнавайте, когда что-то нужно обновить.

Создан для понимания того, как на самом деле работают некоммерческие организации

В одном месте можно найти ответы — и знать, что они по-прежнему актуальны

Как это работает

Три шага от разрозненных документов к базе знаний, которой можно
доверять

Everything your organisation needs

Built for how nonprofits actually work

See all the features →

See DocuSmart AI in action

Ask questions in plain English and get instant, citation-backed answers
from your documents

Built for teams like yours

See how DocuSmart AI saves grant writers, programme managers, and EDs hours every week

Nonprofits

Small Teams

More time on mission, less on admin

Your team spends 10-20 hours per grant application searching for historical data across Salesforce, Drive, and email. DocuSmart cuts that to minutes.

10–20hrs

Spent per grant cycle (from nonprofit interviews)

10x

Document retrieval vs manual search

100%

Answers backed by your own documents

No system replacement needed — DocuSmart sits on top of what you already use.

Enterprise-grade document security

Your documents are always encrypted and never used for AI training. Per-organisation data isolation keeps your knowledge private.

Frequently asked questions

How does DocuSmart connect to my cloud storage?

DocuSmart uses OAuth 2.0 to securely connect to Google Drive, OneDrive, and Dropbox. The connection is read-only — we never modify, move, or delete your files. You can revoke access at any time directly from your cloud provider's account settings. Your documents stay exactly where they are; we simply index them so you can search across everything at once.

What file types does DocuSmart support?

We currently support PDFs, Google Docs, Google Sheets, Google Slides, and Microsoft Word documents. Support for Excel, AI ads, and plain-text files is actively being added. If your team relies on a specific format, let us know and we'll prioritise it.

How does the AI search actually work?

DocuSmart uses Retrieval-Augmented Generation (RAG). When you ask a question, our system first searches your indexed documents to find the most relevant passages, then passes those passages to a large language model to synthesise a clear, accurate answer. Critically, every answer includes citations — links back to the exact source documents — so you can verify information yourself rather than trusting the AI blindly.

How does the Slack integration work?

Install the DocuSmart app in your Slack workspace, then use the /ds command followed by your question in any channel or DM. Our AI searches your documents, generates a concise summary with key points, and replies directly in Slack with both the answer and source links. No tab-switching, no context loss — answers arrive where your team already works.

Is my data used to train AI models?

No. Your documents are private and confidential. We never use your data to train AI models, share it with third parties, or retain it beyond what is required to operate the service. Your data belongs to you, and we treat it accordingly.

How accurate are the answers?

Because DocuSmart searches your actual documents before generating a response — rather than relying on pre-trained knowledge — answers are grounded in your real content. Accuracy depends on the quality of your source documents, but every answer includes source citations so inaccuracies are immediately identifiable and correctable.

Built for nonprofits

Nonprofit teams handle an enormous volume of documents — grant applications, funder reports, impact assessments, board minutes, compliance filings, and programme data — often spread across multiple cloud drives with no consistent naming convention. DocuSmart was built with this reality in mind. Ask a question like "what outcomes did we report to the Community Foundation last year?" and get a sourced answer in seconds, without knowing which folder it lives in or which staff member wrote it. For grant writing, retrieve past application language, success metrics, and budget narratives instantly. For funder reporting, compile results from scattered programme records without a manual search. For compliance, find the policy or procedure you need before an audit, not after.

Built for small businesses

For teams of 10 to 50 people, institutional knowledge is one of the most undervalued assets — and one of the most fragile. AI as a context, decisions, and process knowledge leaves with them. When a new hire joins, they spend their first weeks interrupting colleagues with questions that are already answered somewhere in your shared drive. DocuSmart solves both problems. New team members self-serve answers from SOPs, onboarding documents, and past project files from day one. Existing staff find contracts, proposals, and client notes without knowing exactly where they were saved or who filed them. Your knowledge base becomes a living, queryable resource rather than an archive nobody searches.

Compliant by design — EU AI Act & GDPR

DocuSmart is designed to meet the requirements of the EU AI Act and GDPR from the ground up, not retrofitted as an afterthought. Under the EU AI Act, DocuSmart is classified as a minimal-risk AI system. It performs document retrieval and text summarisation — it does not make automated decisions that affect individuals' rights, access to services, or legal standing. There is no profiling, no consequential decision-making, and no use of biometric or sensitive personal data. Organisations subject to the EU AI Act — including public bodies, NGOs, and regulated businesses — can deploy DocuSmart with confidence that it falls outside the high-risk categories defined in Annex III of the regulation.

From a GDPR perspective, all customer data is isolated per user and per organisation — your documents are never accessible to other customers. We apply AES-256 encryption both at rest and in transit. We do not use your documents or queries to train AI models, and we do not share your data with third parties for any commercial purpose. Users retain the right to request deletion of their indexed data at any time. For organisations handling sensitive personal data — such as service-user records, donor information, or employee files — DocuSmart's read-only, per-user-isolated architecture ensures that document search does not become a data governance liability. We are based in Ireland and process data within the European Economic Area.
