The impact of digital experience on the business

How organizations drive value with Digital Experience Monitoring

INTRODUCTION

The impact of DX on the business

Digital experience is profoundly changing businesses and organizations in multiple industries.

Whether they are customers, constituents, or internal employees, all users expect and often depend on flawless digital experiences. For organizations, it's critical to deliver exceptional experiences to drive revenue, acquire and retain customers, meet service level agreements (SLAs), and reduce costs.

The following stories illustrate how vital digital experience can be across any industry and how AI-driven, automated, frontend-to-backend digital experience monitoring (DEM) enables organizations to deliver flawless digital experiences and drive business results.

PHOTOBOX

Deliver frictionless e-commerce experiences

In the retail sector, where digital transformation has rapidly accelerated, the digital customer journey is crucial, whether to complement physical stores or to provide everything digitally.

Photobox, a company specializing in photo printing and gifting services, faced the challenge of monitoring a complex technology stack that powered a digital customer journey often lasting hours or even weeks. With no physical stores, Photobox relied on its website and app for personalized photobooks and gifts. However, managing multiple solutions across the stack was cumbersome and costly.

To streamline this process, Photobox implemented the Dynatrace all-in-one observability and digital experience monitoring solution. With automation and AIOps, Photobox reduced mean time to resolution (MTTR) by up to 80%, resulting in more seamless customer experiences.

Additionally, during peak events like Black Friday, Photobox was able to optimize the customer journey, leading to a 60% reduction in critical incidents. Real-time insights also empowered teams to make data-driven decisions and maximize revenue.

> Dynatrace has been revolutionary for Photobox, as our teams are now able to do work that previously would have taken hours in just minutes.
>
> **Since Dynatrace has been introduced, we're able to identify the core pain points in any customer's journey and focus our engineering effort on resolving those pain points.**
>
> That's allowed us to increase our customer experience massively, because Dynatrace is helping us to respond to things faster and in a more automated fashion.

TD BANK

Drive customer-centric banking solutions

With increasing online access for financial services, organizations must provide great digital experiences for their customers.

With the digital transformation of banking, TD Bank invested in a more agile and dynamic digital ecosystem, moving its critical applications from legacy on-premises data centers to a mixture of private and public clouds. As TD Bank modernized its technology stack, it became more complex to manage, leading to operational inefficiencies. The bank needed a solution to help execute a strategy focused on agility, accessibility, and customer-centric solutions, emphasizing digital adoption and seamless experiences.

With the Dynatrace unified observability platform and digital experience monitoring, TD Bank now responds swiftly to issues before users are affected. AI-powered insights pinpoint the root cause of emerging problems, enabling them to identify 25% more incidents and respond 20% faster. With end-to-end visibility across its tech stack, TD Bank has eliminated redundant monitoring solutions, reducing maintenance tasks and lowering infrastructure costs by up to 45%.

As a result, TD Bank's transaction failure rate dropped significantly, alleviating customer irritants by more than 60% and enabling TD Bank to deliver on its promise to focus on the human side of banking.

> Previously, we lacked visibility into how our customers were interacting with our solutions. We often received calls into our contact center when issues arose, rather than being able to identify them proactively. If you think about the time it takes to make a call, have somebody listen, then escalate a response, 30 minutes to an hour have gone by. We could have easily avoided that if we had the right solutions in place.
>
> There are many options out there and believe me, we've tried them. But if you look at the track record of Dynatrace, there's constant innovation that really drives progress. **Dynatrace gives us the ability to look into all of our critical functions and services and dig into what's driving the experience for our customers."**

DUBAI CUSTOMS

Enhance customer experience for government services

For government organizations, fast and reliable digital experiences are critical to enable customers and constituents to access a wide range of important services.

Dubai Customs, one of the world's leading customs administrations for legitimate trades, continues to transform its services to provide smart platforms that help drive a thriving online business in the UAE. To manage the performance and availability of its digital services, Dubai Customs previously relied on a variety of legacy monitoring solutions. This fragmented approach resulted in delays to innovation and performance blind spots, which meant the organization was often unaware of problems until customers reported them.

The Dynatrace unified observability and digital experience monitoring platform allows Dubai Customs to be proactive with customer experience management. Instead of relying on customers to report problems, Dubai Customs can capture tracking numbers on the backend, identify users, and create dashboards for its customer service team.

In addition, full stack monitoring enables teams to run all tests using a single solution during code promotion, significantly improving efficiency by reducing tests from approximately 30 to just three. Dubai Customs has also accelerated time-to-market for digital services and application updates by approximately 70%, resulting in higher-quality releases.

> Dynatrace has completely transformed the way we operate as an organization. The precise answers from Dynatrace enable us to maintain a fast clearance process and meet the strict SLAs we use to ensure we meet our customers' expectations.
>
> **We can now identify and resolve issues immediately and no longer have to wait for customers to tell us if there's a problem."**

MELIA HOTELS INTERNATIONAL

Accelerate digital transformation for hospitality

In the travel industry, as much as the pandemic hurt business in many ways, it also greatly increased the rate of digital transformation.

As global travel demand surged during the pandemic recovery, Meliá Hotels International faced the challenge of scaling its booking services rapidly. To optimize user experiences during peak periods, Meliá migrated critical applications to a cloud-native environment. This move provided the necessary scalability and agility to meet increased booking demands and enhance digital functionality.

However, maintaining observability in the dynamic cloud-native architecture posed difficulties.Leveraging the Dynatrace unified observability and digital experience monitoring platform helped Meliá adapt to modern travelers' needs, significantly shifting from in-person to digital interactions. The transition increased digital transactions from 40% to over 80% during the pandemic.

Precise analytics pinpoint where guests face difficulties, allowing Meliá to enhance the digital experience and ensure guest comfort. Previously, teams spent considerable time on manual problem-solving within digital services. Now, with instant root cause identification, Meliá can proactively address issues, sparing guests from inconvenience and allowing the team to concentrate on innovation and service enhancement. Moreover, a single source of truth empowers various business units to access insights, enabling support teams to offer quick, tailored solutions, thus maintaining high standards of guest service.

Before Dynatrace, we used to spend hours manually searching through metrics, logs, and traces to piece together insights about user experience. Now, this takes minutes or seconds.

This has enabled our teams to focus more time on driving business and customer value, and to ensure our ongoing success during what has been a challenging time in our industry."

VITALITY

Innovate with proactive servicing for insurance

Digital transformation is significantly impacting the insurance industry by reshaping business models, customer experiences, and operational processes.

Vitality, a U.K. health and life insurance provider, has a core purpose of making people healthier. To promote healthy behavior, Vitality offers its members points for completing healthy activities, which they can then redeem for perks and benefits from different partners. However, for this reward program to work, it depends on a complex web of technology, systems, and integrations, along with a hybrid, cloud-native environment.

To ensure that it could deliver a simple and frictionless experience to members, Vitality implemented a unified observability and digital experience monitoring strategy with Dynatrace that gave it insight into the entire digital journey and enabled the insurance company to adopt proactive servicing if something went wrong. The optimized experience led to a 65% reduction in lapse rates for the policies which were targeted for intervention.

In addition, Vitality was also able to shorten the timeframe for integrating two new partners from three months to just three weeks, providing their members with new ways to earn points and redeem them for rewards.

> **The work we're doing with Dynatrace is critical in helping us to meet the expectations of our members and deliver brilliant customer experiences.** Speed to market is increasingly important, so the confidence we get from Dynatrace's AI insights is invaluable, allowing us to accelerate innovation and integrate with new partners in much shorter timeframes.
>
> Being able to proactively reach out and rectify issues for our customers before they've even realized they've had a problem has also created a phenomenal impact in customer retention. Ultimately, Dynatrace helps us to improve customer loyalty and protect the bottom line of our business.

CONCLUSION

The Dynatrace difference

Automatic front-to-back context

Dynatrace provides a complete view of users' digital experience across all applications, including how it impacts your business KPIs and connects to your entire IT environment.

Instantly analyze digital experience data with automatic instrumentation and data collection, all in context and seamlessly connected from frontend to backend in one platform.

AI-driven answers in one platform

With Real User Monitoring, Session Replay, and Synthetic Monitoring natively integrated and powered by causal AI, you can quickly gauge how users interact with your applications and services, understand the business impact of problems, and identify the root cause for faster remediation.

Dynatrace equips business, development, and operations teams with a unified source of truth for detailed insights into availability, performance, and user behavior to detect and triage problems faster, optimize performance, and improve business outcomes.

Tailored expertise and recommendations

To maximize the value organizations get from Dynatrace, Business Insights, a unique team of digital experience experts, offers deep product expertise and exclusive technology.

Whether you are just getting started or looking for more advanced use cases, Business Insights can extend your team through a dedicated team of global experts with extensive industry knowledge to ensure you have the right data and recommendations to be successful.

DEM is essential

Customer expectations for digital experience have never been higher. As the pace of digital transformation continues to accelerate, cloud complexity has introduced observability challenges that make it difficult to deliver the exceptional experiences that customers expect. Organizations are increasingly realizing why a great digital experience is essential to their success.

With a solid digital experience strategy to guide your progress and an advanced DEM solution to support it, your organization can meet customer demand for a high-quality digital experience, innovate faster, and ensure a bright future of continued business growth.
